FOREWORD

Though several important works on Ayurveda have been published till now, there is a large number of works which are still in the manuscript stage in libraries and could not see the light. The name of some of these works we know by coming across them in commentaries and compilations. The reason is mostly economic because the texts which are included in the prospectus are studied in institutions and get priority in publication while others lag behind. The result is that to-day teachers and students are not acquainted with even the names of such texts what of going through them.

Toḍarānanda is a work named on Rājā Toḍaramalla, a minister of Mughal Emperor Akbar (16th Cent. A.D.). This is an encyclopaedic work having *Ayurveda Saukhya* as a component. *Ayurveda Saukhya* too is a voluminous work dealing with several aspects of Ayurveda. The present volume deals with the portion of Materia Medica which is generally known as *Nighaṇṭu*.

In 1972, when I was editing the *Mādhava Dravyagūṇa*, I had the opportunity to see a manuscript of the *Ayurveda Saukhya*. I was surprised to find that it followed Mādhava's *Dravyagūṇa* faithfully in the context of *Nighaṇṭu* portion though the author did not mention the name of Mādhava or its work anywhere. It is also to be noted that though in other portions, source books are quoted explicitly, in *Nighaṇṭu* portion it is conspicuously absent. Hence, it cannot be said definitely what was the source of this portion.

It is almost certain that Mādhava's *Dravyagūṇa* was quite earlier than the *Ayurveda Saukhya* because of its having been quoted by medieval authors and commentators like Sarvānanda (12th Cent. A.D.) and Vopadeva (13th Cent. A.D.). As regards Bhāva Miśra, he happened to be in 16th Cent. A.D. and thus

may be contemporary to the work *Āyurveda Saukhyā*. The verses of the Bhāva Prakāśa found in the *Āyurveda Saukhyā* lead us to think that either these verses are later interpolations (particularly if they are not found in majority of the MSS.) or Bhāva Miśra himself might be associated with this work. A number of expert scholars of Banaras were engaged by Rājā Toḍaramalla for this encyclopaedic work, and it is not improbable if Bhāva Miśra, a resident of Magadha (Gayā) adjoining Kashi and a renowned expert of *Dravya guṇa* himself participated in this great task. It is to be noted that Bhāva Miśra, apart from the *Bhāva Prakāśa Nighaṇṭu*, also composed another *Nighaṇṭu* entitled *Guṇa ratna mālā*. Without close association, it becomes difficult to explain such situations. The possibility of a common source of both the authors, as proposed by the editor, is also not improbable.

Vaidya Bhagwan Dash, the editor of this work, is well-known for his devotion to enriching the literature of Ayurveda and also to making it intelligible to the outer world. He has done this job with great labour and deserves congratulations not only of myself but of the entire circle of intellectuals interested in the study of Ayurveda. I hope, he will be able to bring out other remaining volumes so as to present a total picture of the work.

PREFACE

There has been an increasing interest in the utilisation of the traditional systems of medicine for promotive, preventive and curative health services in many countries of the world. Ayurveda is perhaps the oldest traditional system of medicine in India catering at present to the medical needs of a large section of both the urban and rural population of this country. This system of medicine has also caught the attention of medical practioners in the West. The Materia Medica of ayurveda represents a rich storehouse of knowledge of drugs based on centuries of experience. Scientists, research workers, physicians and students interested in ayurveda, often experience great difficulty in obtaining authentic works on the subject with a translation in a language generally understood by them. To cater to this long felt need, we are happy to present here the Materia Medica of Ayurveda by Rājā Toḍaramalla with its English translation along with critical notes.

Toḍaramalla hailed from Oudh in Uttar Pradesh, India. He was the *dewan* (Minister) under the great Moghul Emperor Akbar who ruled during the sixteenth century A.D. The emperor was well known for his secular outlook. Toḍaramalla, in spite of his unquestioned loyalty to this Muslim emperor, was a staunch follower of Hinduism. It was apparent to him that Hindu culture in India was in a decadent state and at a low ebb. Quite apart from religion, even sciences like astrology and medicine had fallen into disrepute. Very little original work, if any, was being done in these areas of knowledge and even the extant texts on various subjects were falling into disuse. Such of them as were available had been mutilated and subjected to unauthorised interpolations with the accretion of superstitious ideas through the centuries.

In his mission to revive and revitalise Hindu culture both in the religious and secular fields, he took the help of several eminent Sanskrit scholars of Varanasi and composed encyclo-

paedic works on 23 different subjects by collecting material from authentic texts which were then available. To this, the added knowledge and experiences of the experts in the subject were incorporated. Most of the original texts which were then utilised for the composition of these works are no more extant and those which have survived the vicissitudes of time are now in a mutilated form with several unauthorised and erratic interpolations. It is in this context, therefore, that today Toḍarmalla's work has gained considerable importance, and it is for the first time that the Materia Medica portion of his encyclopaedic work on ayurveda is being brought under print. The series of works on 23 topics of Hindu culture composed under the auspices of Rājā Toḍaramalla is called *Toḍarānanda* which means "the delight of Toḍaramalla". The term *saukhyam* meaning "happiness" is suffixed to the name of each text on a particular topic. Thus the text on ayurveda is called *Ayurveda Saukhyam*. This *Ayurveda Saukhyam* comprises several chapters each one of which is called *harsa* meaning "pleasure".

In the beginning of each *harṣa*, *maṅgalācaraṇa* or the auspicious invocation in the form of a prayer to God is furnished. The colophons at the end of each chapter indicate the contents and chapter number, among others. These invocations and colophons are missing in some manuscripts.

Calligraphic errors have not left this monumental work untouched. Six different manuscripts collected from various libraries of India and Nepal were utilised for the collation and editing of this work. Some of these manuscripts are incomplete. But in others which appeared at first to be complete, some chapter numbers have been arranged and named differently. Some chapters have also been omitted in some of these manuscripts. Therefore, while editing, it was felt desirable to serialise and renumber all these chapters making up a total of 97. This was a delicate job to perform because at the end of the chapters, in some manuscripts, the colophons are missing. For the preparation of this work on Materia Medica, ten chapters of *Ayurveda Saukhyam* have been utilised. On the basis of the remaining chapters, it is contemplated to prepare separate

volumes on different topics shortly and these texts will be in the hands of scholars gradually and in stages.

Ayurveda Saukhyam deals with various topics of ayurveda including fundamental principles, anatomy, physiology, hygiene and public health, examination of patients, diagnosis, prognosis and treatment of diseases, iatro-chemistry and materia medica. Materia Medica and allied topics are found scattered in ten different chapters of this work. The eighth chapter deals with the properties of drugs. This chapter is available in five out of the six manuscripts consulted. In one manuscript, however, this chapter is left incomplete.

This eighth chapter *inter alia* deals with some extraneous topics like *vamana* (emetic therapy) and *virecana* (purgation therapy). These topics, along with other allied topics, like *snehana* (oleation therapy), *svedana* (fomentation therapy), *nirūha* and *anuvāsana* (medicated enema), *nasya* (inhalation therapy) and *rakta mokṣaṇa* (blood letting) are described in detail in the 85th to 88th chapters of the edited text. It is proposed to bring out a separate volume on these topics, which taken together, are called *pañcakarma* therapy. These extraneous topics, therefore, are excluded from this work. This 8th chapter of the original text is divided into 29 chapters in the present work—one chapter dealing exclusively with one group of items.

The 12th chapter of the original text deals with the description of various groups of drugs collected from classics like *Suśruta Samhitā*. This chapter is, therefore, included in the 30th chapter of the present work. This chapter is available in three manuscripts.

The last eight chapters of the original text deal with mostly the *nighaṇṭus* or synonyms of drugs and the method of preparation of some food items. Details of these chapters are given overleaf :

Chapter Nos. given in the manuscripts	Chapter Nos. in the edited text	Chapter Nos. in the pre- sent work	The number of manuscripts in which these chapters are available
84	90	31	4
85	91	32	2
86	92	33	3
87	93	34	3
88	94	35	3
89	95	36	3
90	96	37	3
91	97	38	3

There are of course, separate texts on the synonyms of drugs of ayurveda. But most of the extant ayurvedic works on materia medica invariably provide synonyms of drugs along with their properties. It is keeping in view this tradition of ayurveda, and also in order to make the present work more useful to research workers, physicians and students that these eight chapters have been included here.

All the manuscripts procured for the editing of this work were full of grammatical and syntactical errors. Some of these mistakes were common to all the manuscripts. Even the arrangement of topics in these manuscripts varied considerably. Many terms and suffixes used in this work do not stand correct according to the tradition of Pāṇini's grammar. The readers will find some such terms even in the present publication. It is likely that these mistakes were there in the original texts from where references were collected and the scholars who did the job did not think it proper to make any change. The other possibility is that these errors were introduced by subsequent calligraphers.

There are some orthographical peculiarities in all the manuscripts of this work. In several places *na* has been used in the places of *na*, *sa* in the place of *śa* and *ṣa*, *ba* in place of *va*, *kha* in the place of *ṣa*, *ja* in the place of *ya*, *ra* in the place of *la*,

gha in the place of *dha* and *vice versa*. In several places the consonants after *ra* are duplicated.

While editing this work, the variant readings (which include some grammatical errors also) are given at the end of each chapter under Notes and References and the original manuscripts are referred to as *ādarśa pustikā*. Some topics given in this work are also available in other extant ayurvedic works. The variant readings in these texts are given at the end and these extant texts are referred to as *ākāra*. Some portions of the manuscripts were so corrupt and incomplete that we did not think it proper to include them in the main text. In view of their significance from the materia medica point of view, they are given in the "Notes and References" at the end of the chapters.

In the manuscripts some texts are originally referred to by name from where the information was collected by the scholars. The readings in these texts bear a striking resemblance to those of *Mādhava dravyagūṇa* and *Bhāva prakāśa*. The former has been edited by Prof. P.V. Sharma and published by Chawkhamba Vidya Bhawan, Varanasi in 1973. References to these works are conspicuous by their absence in the original manuscripts. However, to facilitate research and study on this subject, these references are provided in the present work in square brackets []. Since the names of these texts are not described in the original manuscripts, it is very difficult to determine as to who borrowed from whom. It is also very likely that both have borrowed their texts from a third source which has since become extinct.

While providing the English translation of the text, we have been very conscious of avoiding mistranslation. Where equivalent English words are not available, in the English text, the Sanskrit words have been transliterated as such and printed in italics. The glossary appended to this work provides a brief explanation of such terms. The nearest English equivalents of many such technical terms are given in parentheses in the English text itself.

The botanical names of most of the medicinal plants are given in parentheses against the Sanskrit names of drugs in the

side-headings. Similarly, the English equivalents of animals, metals, minerals, etc., are provided. Wherever there is any controversy regarding the correct identification of a drug, the botanical or English names have not been provided, lest the reader should be misguided.

One manuscript of this work was procured from a private individual of Varanasi. Some scholars had attempted a Hindi translation of this work. From the language and the paper, it appears that this attempt was not of recent origin. In some places, this Hindi translation has been consulted to decide upon the exact reading of the text.

Acknowledgements

Authors are exceedingly grateful to Pandit Shiv Sharma, President of the Central Council of Indian Medicine for supplying two manuscripts of this work from the collections of his illustrious father Vaidya Rama Prasad Sharma, who was the Raja Vaidya (Physician to the ruler) of Patiala. Grateful thanks are also due to the curators of the Abhilekhalaya, Kathmandu, the Royal Asiatic Society and Sanskrit College both at Calcutta for providing calligraphic/photostat copies of the manuscripts of this work available with them.

For the preparation of this work, Subhash Gupta, Kanchan Gupta and Sharada Gupta have provided considerable assistance. The authors are extremely thankful to them.

A publication of this kind may not be a commercially viable proposition. It must, therefore be said to the credit of the publishers that they have brought it out in a spirit of dedication solely with the aim of propagating this unique science of medicine in the service of the suffering humanity.

INTRODUCTION

The history of the materia medica of ayurveda is as old as the Vedas. The *Ṛk Veda* (prior to 4500 B.C.), which is the oldest repository of human knowledge, has described about 67 plants. Other Vedas, namely, *Sāman*, *Yajus* and *Atharvan* are also replete with references to various aspects of ayurveda, including the description of drugs and their therapeutic effects. Medicinal plants are also described in the *sāṃhitā*, *upaniṣat* and *purāṇa* texts.

Ayurveda is an *upaveda* or subsidiary text of the *Atharva veda* and it has the following specialised branches ;

- (1) *Kāya cikitsā* or Internal medicine ;
- (2) *Śalya tantra* or Surgery ;
- (3) *Śālākya tantra* or the treatment of diseases of head and neck ;
- (4) *Agada tantra* or Toxicology ;
- (5) *Bhūta vidyā* or the management of seizures by evil spirits and other mental disorders ;
- (6) *Bāla tantra* or Paediatrics ;
- (7) *Rasāyana tantra* or Geriatrics including Rejuvenation therapy ; and
- (8) *Vājikaraṇa tantra* or Science of Aphrodisiacs.

Classics were composed on each of these specialised branches. In some classics, all these branches of ayurveda were put together. Prior to the seventh century B.C., many ayurvedic classics were composed. The important ones, among them, are *Caraka sāṃhitā*, *Suśruta sāṃhitā*, *Bhela sāṃhitā*, *Kāśyapa sāṃhitā* and *Hārīta sāṃhitā*. Most of these texts are not available in their original form now. *Caraka sāṃhitā*, which was originally composed by Agniveśa and was called *Agniveśa sāṃhitā*, was subsequently redacted by Caraka. Even this redacted version is not available in its entirety now. Out of 120 chapters,

about 41 chapters were missing and were subsequently added by a fourth century scholar named Dṛdhabala. *Suśruta saṁhitā* was also redacted by Nāgārjuna. The remaining three texts are not available in their complete form. *Hārīta saṁhitā*, which is available now, appears to be different from the original one. Subsequently, two texts of Vāgbhata, namely, *Aṣṭāṅga hṛdaya* and *Aṣṭāṅga saṁgraha* were added to this series of classics and both these works are available in their complete form. In all these important ayurvedic classics, separate chapters are provided for the description of drugs and their therapeutic properties. The fundamental principles dealing with the concept of drug composition and drug action are also described in these texts. *Dravya guṇa* or materia medica, as a separate text, came into existence much later.

The advent of Buddhism in India brought considerable change in the practice of ayurveda. Surgery, the performance of which is invariably associated with pain, was treated as a form of *himsā* or violence, and therefore, its practice was banned. To compensate this loss, and to alleviate the sufferings of ailing humanity, more drugs were added during this period to ayurvedic materia medica. Prior to this period, metals and minerals were no doubt used for therapeutic purposes. But their use was in a crude form and they were sparingly used. Buddhist scholars added considerably to the metals and minerals in ayurvedic materia medica, inasmuch as *Rasa śāstra* or Iatro-chemistry, formed a specialised branch and many authentic texts were composed on this subject. Thus, the loss by discarding the practice of surgery was well compensated by the addition of iatro-chemistry to the materia medica of ayurveda during this period.

Some of the Buddhist rulers, like Asoka, established several herb-gardens, so that people could get drugs conveniently for the treatment of their diseases. Buddhist monks were encouraged to learn ayurveda and practise it, which was considered to be the most convenient and popular method of spreading the teachings of their Preceptor. Thus, through Buddhism, ayurveda spread to Śrī Lankā, Nepal, Tibet, Mongolia, the Buriyat Republic of Soviet Russia, China, Korea, Japan and

other South-East Asian countries. Ayurvedic texts, including texts on *materia medica*, were translated into the languages of these countries and these are still available in translated form even though some of their originals have become extinct in the country of their origin. Based upon the fundamental principles of ayurveda, some local herbs, diet and drinks were included in the traditional medicine of the respective countries. The *materia medica* of ayurveda was thus enriched.

India was severally invaded by outsiders like the Greeks, the Saks and the Hoons. When these people came into contact with the rich tradition of India, especially the medical science, they carried back with them medicines and doctors. Indian doctors who went with them, translated ayurvedic texts into their languages. The new drugs which were specially used in those places were incorporated into the ayurvedic pharmacopoeia. Such repeated exchanges of scholars enriched ayurveda and its *materia medica*. Through commercial channels ayurvedic drugs and spices were exported to these countries and they were held in high esteem there.

Several universities were established during this period for imparting theoretical and practical training in different religious and secular subjects. Taxila and Nalanda were the two such universities which attracted not only intellectuals, from different parts of this country but many from abroad. In Taxila, there was a medical faculty with Ātreya as its Chairman. In Buddhist literature, there are many interesting stories and anecdotes about the activities of these universities, their scholars and faculty members. One such anecdote is related to Jīvaka who was three times crowned as the King of Physicians because of his proficiency in the art of healing. He was an expert in paediatrics and brain surgery. It was the practice at that time for candidates desirous of admission to the faculty in the university to appear for a test before the Dvārapāla or the gate-keeper. Jīvaka and several other princes had to face these tests before being considered for admission to the medical faculty. They were asked to go to the nearby forests and collect as many plants as possible, which did not possess any medicinal property. By the evening candidates returned

with several plants which they considered to be free from medicinal properties. Jivaka did not return for several days and, when he did, he was empty handed. On a query from the gate-keeper, Jivaka replied, "I could not find any plant, or for that matter anything which does not have medicinal value." He alone was selected for admission to the medical faculty. This was the status of knowledge of the candidates for the medical faculty at that time. This was the time when the knowledge of materia medica became highly developed.

As has been mentioned before, Buddhism was partially responsible for the arrest of development in some branches of ayurveda. Foreigners who ruled over India brought with them medicines and medical men from their own countries and patronised them. The practice of ayurveda, thus, lost the support and patronage of the rulers. Apart from foreign invasions, during the medieval period, the ruling states in this sub-continent itself were engaged in fighting amongst themselves. The spread of Buddhism was so rapid among the masses of India and abroad that the intellectuals of the country were terribly afraid for their own existence. While their rulers were engaged in political battles, these intellectuals quarrelled among themselves in the name of religion. During this process, many libraries were burnt. Quite apart from any original thinking, the scholars could not preserve even the books which had already been composed prior to this period. The practice of ayurveda was despised. It was considered sinful to touch a dead body or a woman giving birth to a child. Thus, the practice of obstetrics, anatomical dissections and surgery went out of the hands of the physicians. Examination of urine and stool was considered unclean. Pulse examination by touching the patient was frowned upon. Thus, the practitioners of ayurveda became outcasts. The profession did not attract intellectuals. Specialised branches disappeared from the scene. What remained were only a few medicines for a few diseases and these were practised by people of low intellectual calibre.

Because of the arrest of the progress, many superstitious interpolations and redactions crept into the medical texts. Even these texts were not readily available. Such was the

state of affair during the sixteenth century A.D. which moved Rājā Toḍaramalla to salvage the remanants of these sciences from the then available mutilated texts by incorporating the knowledge and experience of the scholars of that time. In this encyclopaedic work different topics of ayurveda are described in 97 chapters. Out of these, only ten selected chapters have been utilised for preparation of the present work on materia medica.

Literature on Ayurvedic materia medica

The oldest text on the materia medica of ayurveda now extant is the *Rasa vaiśeṣika* of Nāgārjuna (fifth century A.D.). It deals, among others, with various concepts of drug composition and drug action. During the medieval period, the *Aṣṭāṅga nighaṇṭu* was composed by one Vāhatacārya. This work describes the synonyms of drugs belonging to various groups or *ganās* of *Aṣṭāṅga saṁgraha*. This Vāhatacārya seems to be different from Vāgbhaṭa, the author of *Aṣṭāṅga hrdaya* and *Aṣṭāṅga saṁgraha*. This seems to be the work done during the eighth century A.D..

The *Paryāya ratnamālā* of Mādhava (9th century A.D.) describes the synonyms of different groups of drugs. *Dhanvantari nighaṇṭu* is perhaps the most popular text where the properties of different groups of drugs are described along with their synonyms. This work was composed prior to the thirteenth century A.D. *Nighaṇṭu śeṣa* was composed by a Jain scholar namely Hemacandra in twelfth century A.D. It contains the synonyms of different types of plants. *Śodhala nighaṇṭu* is another important work on the materia medica of ayurveda next to *Dhanvantari nighaṇṭu*. It was composed during the twelfth century A.D. *Madanapāla nighaṇṭu* composed by Madana pāla in 1374 A.D. describes the properties of different types of drugs. *Kaiyadeva nighaṇṭu* written by Kaiyadeva, describes the properties of 9 groups of drugs. It was composed during A.D. 1450. Bhāva miśra composed an encyclopaedic work called *Bhāva prakāśa* during the sixteenth century A.D. It has a separate section on the description of drugs and their synonyms. Besides, several texts on *rasa śāstra* were composed during this period. In these texts the properties of metals and minerals and a few vegetable as well as animal products are also described.

These texts on the materia medica of ayurveda were composed prior to the composition of *Āyurveda Saukhyam* of Todarānanda. Many verses of *Āyurveda Saukhyam* are also available in the *Bhāva-prakāśa*, *Āyurveda prakāśa* and *Mādhava nighaṇṭu*, even though these names are not quoted by the author. A cursory glance through the text of *Āyurveda Saukhyam* of Todaramalla indicates that the author has taken care to indicate the name of the text or the author from where material has been compiled. *Mādhava nighaṇṭu*, *Āyurveda prakāśa* and *Bhāva prakāśa* were already composed when *Āyurveda Saukhyam* was under preparation. Either these works were not considered important enough to be cited as references or they were not available to the scholars who compiled the text of *Āyurveda Saukhyam*. The identity of the texts between these works namely, *Āyurveda Saukhyam* on the one hand, and *Mādhava nighaṇṭu*, *Āyurveda prakāśa* and *Bhāva prakāśa* on the other, indicates that all of them might have collected their textual material from another work which has since gone extinct.

The classification of drugs, food and drinks in these texts vary from each other. The system of classification followed by *Mādhava nighaṇṭu* is closer to the classification followed in *Ayurveda Saukhyam*.

Basic Concepts regarding the Creation of the universe

Ayurveda has drawn its basic concepts from the different philosophical systems of ancient India. The *Sāṃkhya-Pātañjala* system and the *Nyāya-Vaiśeṣika* system have considerably influenced the physical, physico-chemical, physiological and pharmacological theories of ayurveda. *Sāṃkhya-Pātañjala* system accounts for the creation of the universe and composition of matter on the principles of cosmic evolution. The *Nyāya vaiśeṣika* system lays down the methodology of scientific studies and elaborates the concepts of mechanics, physics and chemistry.

The manifested world, according to the *Sāṃkhya* is an evolution of the unmanifested *Prakṛti* or primordial matter, stuff, which is conceived as formless and undifferentiated, limitless and ubiquitous, indestructible and undecaying, ungrounded and

uncontrolled as well as without beginning and without end. This unity of *Prakṛti* is a mere abstraction. It is in reality an undifferentiated manifold and indeterminate infinite continuum of three attributes called (1) the *sattva* (2) the *rajas* and (3) the *tamas*. The *sattva* attribute is the medium of reflection of intelligence. The *rajas* represents the energy which creates a tendency for work by overcoming resistance. The *tamas* is the mass or inertia where the effects of *rajas* and *sattva* in the form of energy and conscience respectively are manifested.

These three *guṇas* or attributes are interdependent. The *rajas*, in combination with the *sattva*, helps in the creation of the sensory and motor faculties including the mental faculty. The *rajas*, in combination with *tamas*, gives rise to the five categories of *tanmātrās* which are also known as subtle *bhūtas*. These *tanmātrās* are in the form of quanta of different types of energy, which, by different types of permutation and combination, gives rise to different categories of material. All these quanta of energy are present in all the types of matter. Therefore, there is nothing like a pure substance consisting of only one type of energy. It is at this stage that the energy is transformed into matter with undifferentiable distinction.

These unmanifested *tanmātrās* and the manifested *mahābhūtas* are of five types namely, *prthvī*, *ap*, *tejas*, *vāyu* and *ākāśa*. Since there is nothing like a pure substance, as has already been explained, the substance of a drug is called *pārthiva*, *āpya*, *aijasa*, *vāyaviya* or *ākāśīya*, depending upon the predominance of the *tanmātrās* of *prthvī*, *ap*, *tejas*, *vāyu* and *ākāśa* respectively in its composition.

According to *Nyāya-Vaiśeṣika* system, there are nine *dravyas* or categories of matter. They are the five *mahā bhūtas*, namely, *prthvī*, *ap*, *tejas*, *vāyu* and *ākāśa* and *dik* (direction or space), *kāla* (time), *ātman* (soul) and *manas* (mind). It is significant to note here that the time and space are considered in *Nyāya-Vaiśeṣika* as two different categories of matter. Similarly, *ātman* and *manas* are also considered as matter. Thus, according to *Nyāya-Vaiśeṣika*, the entire universe, including the time, space, soul and mind is of nine categories. Depending upon

their attributes all the basic atoms of modern physics and chemistry can be classified into these five categories of *mahābhūtas*. If these items are to be explained according to the *Sāṃkya-Pātañjala* system then each one of these atoms is a conglomeration of five categories of energy or *tanmātrās*, having a mass in the form of *pṛthvī*, cohesion or gravitation in the form of *ap*, heat or light in the form of *tejas*, motion in the form of *vāyu* and intermittent space in the form of *ākāśa tanmātrā*. Thus, the *Nyāya-Vaiśeṣika* concept of matter begins from where the *Sāṃkhya-Pātañjala* concept of matter ends. There is a subtle difference between these two concepts.

These *mahābhūtas* are present both in drugs and in human bodies, in a particular proportion. The human body grows during young age, gains stability during adulthood and gets decayed or reduced during the old age. During all these stages of human life, these *mahābhūtas* remain in a particular proportion in a state of equilibrium in the human body. During the different stages of life, because of the activities of life force represented in the form of the action of *agni* or enzymes, there is a natural consequence of these *mahābhūtas* being consumed for the manifestation of energy and heat. This natural loss is replenished and the normal growth and maintenance of stability are achieved by the supplementation of these *mahābhūtas* through intrinsic and extrinsic sources i.e., food, drinks, senses, air, light and mental activities.

If there is any change in this equilibrium of *mahābhūtas* in the human body, it results in disease and decay. To correct this state of imbalance, the patients are given different types of drugs, food, drinks and regimens which help in the maintenance of this state of equilibrium. This, in brief, is the concept on the basis of which a drug is selected for the treatment of a disease. But it is very difficult to ascertain the nature of the *mahābhūtas* which have undergone changes in the body. It is also difficult to ascertain the quantum of *mahābhūta* present in a particular drug, diet or regimen. That is why, for all practical purposes, this theoretical concept in *ayurveda* has further been simplified with a view to enable the physician to determine with ease and convenience the nature of

disturbance in the body and the type of drug, diet and regimen required for a healthy person and a patient.

Composition of Human body

The five *mahābhūtas* which enter into the composition of the human body are classified into three categories, namely (1) *doṣas*, (2) the *dhātus* and (3) the *malas*. *Doṣas* govern the physiological and physico-chemical activities of the body and these are three in number, namely (1) *vāyu*, (2) *pitta* and (3) *kapha*. (These are often mistranslated as wind, bile and phlegm respectively). *Vāyu* is responsible for all the movements and sensations, including motor actions inside the body. *Pitta* is responsible for all physio-chemical activities of the body in the form of metabolism, production of heat and energy. *Kapha* is the substance which maintains compactness or cohesiveness in the body by providing the fluid matrix to it. These *doṣas* are dominated by different *mahābhūtas* as per the table given below :—

<i>Doṣa</i>	<i>Dominating mahābhūta</i>
1. <i>Vāyu</i>	<i>Vāyu</i> and <i>ākāśa mahābhūtas</i>
2. <i>Pitta</i>	<i>Tejas mahābhūta</i>
3. <i>Kapha</i>	<i>Pr̥thvī</i> and <i>ap mahābhūtas</i> .

These *doṣas*, namely, *vāyu*, *pitta* and *kapha*, are further divided into five categories each. Their locations and functions are described in detail in ayurvedic classics. Diseases that are produced by the aggravation or diminution of *doṣas* are also described in ayurvedic texts. From these signs and symptoms manifested in the human body, the physician can judge the type of *mahābhūta* that has gone astray resulting in the manifestation of the disease and this helps the physician to select a particular drug.

The *dhātus* are the basic tissue elements of the body. They are seven in number, namely, (1) *rasa* or chyle or plasma, (2) *rakta* or the red-blood corpuscles, (3) *māṁsa* or muscle tissue, (4) *medas* or the fat tissue, (5) *asthi* or bone tissue, (6) *majjā* or the bone marrow and (7) *śukra* and *rajas* or the sperm and ovum which are responsible for procreation.

These *dhātus* or basic tissue elements remain in a particular proportion in the human body and any change in their equilibrium leads to disease and decay. Their functions are described in detail in ayurvedic classics. Diseases are produced only when the *doṣas* interact with these *dhātus* and this happens only when there is disturbance in their equilibrium.

These seven *dhātus* are also composed of five *mahābhūtas*. However, *pṛthvī mahābhūta* predominates in muscle and fat tissues; *jala mahābhūta* predominates in lymph, chyle and other fluid tissue elements; the hemoglobin fraction of the blood is primarily composed of *tejas mahābhūta*; bones are composed of *vāyu mahābhūta* and the pores inside the body are dominated by *ākāśa mahābhūta*.

If there is any change in the equilibrium of these *dhātus* certain signs and symptoms are manifested in the body which are described in detail in ayurvedic classics. From these signs and symptoms, the physician can ascertain the *mahābhautic* requirement of the body for the correction of the disease, and drugs are selected accordingly.

The *malas* or the waste products are primarily of three categories, namely, (1) the stool, (2) the urine and (3) the sweat. These are required to be eliminated regularly. The catabolic products of the body in the form of unwanted *mahābhūtas* are eliminated through them. If these are not eliminated in the required quantity, then this results in disease and decay, and various signs and symptoms are manifested in the body. From these signs and symptoms, the physician can ascertain the exact *mahābhautic* requirement of the body and select a drug or recipe for correcting the disease.

Thus, the physician can ascertain the exact position of the *mahābhūtas* in the body from certain external signs and symptoms.

Drug Composition

Depending upon the predominance of *mahābhūtas*, drugs

are classified into five categories details of which are given in the table below :

(1)

(2)

Prthvi

Substances that are heavy, tough, hard, stable, non-slimy, dense, gross and abounding in the quality of smell are dominated by *prthvī*; they promote plumpness and stability.

Ap

Substances that are liquid, unctuous, cold, dull, soft, slimy and abounding in the qualities of taste are dominated by *ap* or *jala*; they promote stickiness, unctuousness, compactness, moistness and happiness.

Tejas

Substances that are hot, sharp, subtle, light, ununctuous, non-slimy and abounding in the qualities of vision are dominated by *tejas*; they promote combustion, metabolism, lustre, radiance and colour.

Vāyu

Substances that are light, cold, ununctuous, rough, non-slimy, subtle and abounding in the qualities of touch are dominated by *vāyu*; they promote roughness, aversion, movement, non-sliminess and lightness.

(1)

Ākāśa

(2)

Substances that are soft, light, subtle, smooth and dominated by the qualities of sound are dominated by *ākāśa*; they promote softness, porosity and lightness.

From the above description alone, it becomes difficult at times to select a particular drug, diet, drink or regimen for the treatment of a particular disease. To facilitate the understanding of the *mahābhautic* composition of a drug and to ascertain its exact action on the human body, drugs are classified into six categories on the basis of their tastes; into 20 categories on the basis of their *guṇas* or attributes; into eight or two categories on the basis of their *vīrya* or potency and into three categories on the basis of their *vipāka* or the taste that emerges after digestion. In ayurvedic texts, the actions of different groups of drugs on the above lines are described in detail. From these tastes (*rasas*), attributes (*guṇas*), potency (*vīrya*) and the taste that emerges after digestion (*vipāka*), one can determine the *mahābhautic* composition of the drug. The dominating *mahā bhūtas* in drugs of different tastes are given in the table below :

*Taste**Predominating mahā bhūtas*

1. Sweet
2. Sour
3. Saline
4. Pungent
5. Bitter
6. Astringent

Mahābhautic predominance for the manifestation of twenty *guṇas* or attributes is given in the table below :

*Guṇa**Predominating mahā bhūtas*

1. *Guru* (heavy)
2. *Laghu* (light)

Pr̥thvī and *ap*

3. <i>Śīta</i> (cold)	<i>Ap</i>
4. <i>Uṣṇa</i> (hot)	<i>Tejas</i>
5. <i>Snigdha</i> (unctuous)	<i>Ap</i>
6. <i>Rūkṣa</i> (ununctuous)	<i>Prthvī, tejas and vāyu</i>
7. <i>Manda</i> (dull)	<i>Prthvī and ap</i>
8. <i>Tīkṣṇa</i> (sharp)	<i>Tejas</i>
9. <i>Sthīra</i> (stable)	<i>Prthvī.</i>
10. <i>Sara</i> (fluid)	<i>Vāyu and ap</i>
11. <i>Mṛdu</i> (soft)	<i>Ap and ākāśa</i>
12. <i>Kaṭhina</i> (hard)	<i>Prthvī</i>
13. <i>Viśada</i> (non-slimy)	<i>Prthvī, tejas, vāyu and ākāśa</i>
14. <i>Picchila</i> (slimy)	<i>Ap</i>
15. <i>Slakṣṇa</i> (smooth)	<i>Tejas</i>
16. <i>Khara</i> (rough)	<i>Vāyu</i>
17. <i>Sūkṣma</i> (subtle)	<i>Tejas, vāyu and ākāśa</i>
18. <i>Sthūla</i> (gross)	<i>Prthvī</i>
19. <i>Sāndra</i> (dense)	<i>Prthvī</i>
20. <i>Drava</i> (liquid)	<i>Ap</i>

About *vīrya* or potency, there are two different views. One group of scholars hold *uṣṇa* (hot) and *śīta* (cold) to be the two types of *vīryas*. Regarding their *mahābhautic* composition *uṣṇa dravyas* are dominated by *tejas mahā bhūta* and *śīta dravyas* are dominated by *ap* and *prthvī mahā bhūtas*. Another group of scholars hold eight attributes as *vīryas* and their *mahā bhautic* composition is given below :

<i>Vīrya</i>	<i>Predominating mahā bhūtas</i>
1. <i>Śīta</i>	<i>Prthvī and ap</i>
2. <i>Uṣṇa</i>	<i>Tejas</i>
3. <i>Snigdha</i>	<i>Jala</i>
4. <i>Rūkṣa</i>	<i>Vāyu</i>
5. <i>Guru</i>	<i>Prthvī and ap</i>
6. <i>Laghu</i>	<i>Tejas, vāyu and ākāśa</i>
7. <i>Manda</i>	<i>Ap</i>
8. <i>Tīkṣṇa</i>	<i>Tejas</i>

Vipāka or the taste of a drug after digestion, is of three types, namely, *madhura* (sweet), *amla* (sour) and *kaṭu* (pungent).

The *mahābhautic* composition of these *vipākas* is determined according to those of the respective tastes.

The action of some drugs cannot be explained according to their *rasa* (taste), *guṇa* (attribute), *vīrya* (potency) and *vipāka* (taste that emerges after digestion). It is because the *mahā bhūtas* which take part in the manifestation of *rasa*, *guṇa* etc., do not actually take part in producing the therapeutic action of the drug. They manifest their action only when the drug is administered to the patient and this is called *prabhāva* or specific action.

It will be seen from the above that a drug, diet or drink, for a healthy person or a patient to prevent and cure a disease, is not selected empirically but on the basis of a rational theory. In the ayurvedic texts on materia medica, in respect of each drug, such rational explanations are not provided because such details were not found necessary. None the less, these rational explanations are always kept in view before deciding upon the therapeutic effect of a drug. On the basis of accumulated experience and the repeated observations through centuries, these actions are determined. A physician or a research worker is supposed to have prior comprehension of the rationality of these actions on the basis of *paribhāṣā* that is described in the fundamental concepts.

Mechanism of Drug Action

Before closing this topic, it will be necessary to explain some basic differences in the mechanism of drug action between ayurveda and the modern allopathic system of medicine. Ayurveda, like other systems of traditional medicine, has its unique features. It lays more emphasis on the promotion of positive health and prevention of diseases. The existence of organisms and their role in the causation of several infective diseases in the body have been recognised and elaborated. But for the prevention and cure of such diseases, the drugs and therapies prescribed in ayurvedic classics and administered by ayurvedic physicians do not aim at only killing these organisms. Some of these medicines might have bacteriostatic or bactericidal effects. But most of them do not act in this way. In

ayurveda, more emphasis is laid upon the "field" than the "seed". If the field is barren then the seed, howsoever potent it may be, will not germinate. Similarly, howsoever potent the germ or the bacteria may be, they will not be able to produce disease in the human body unless the tissues of the body are fertile (vitiated) enough to accept them and help in their growth and multiplication. Killing these germs by administering medicine would not solve the problem permanently. It may give instant relief, and perhaps the body resistance during this period will be developed enough as a reaction to the infection by these germs which may result in the prevention of their further attacks. Man cannot live in an absolutely germ-free atmosphere even though he can minimise it. The only thing that can be done safely is to keep the tissues of the body barren and unreceptive towards these germs. Once the body is afflicted, the tissues should be so conditioned by drugs, diet and other regimen that these germs or bacteria, by whatsoever name we may call them, will find the atmosphere hostile towards their survival, multiplication and growth. All medicines and therapies including preventive measures prescribed in ayurveda aim at conditioning the tissues and not killing the invading organisms.

Allopathic drugs which are employed specially for killing organisms may produce the same or a similar effect on the tissues of the body. When they are given in a dose sufficient to kill the invading organisms, they may simultaneously kill the friendly organisms in the body as well, and may impair the normal functioning of the tissues. Thus, they produce side or toxic effects while curing the disease. Ayurvedic medicines, on the other hand, while conditioning the tissues of the body against the organisms, nourish and rejuvenate them. Thus, when the disease is cured, the individual gets many side benefits. It is because of this that all ayurvedic medicines are tonics.

Except for a few modern drugs, e.g. minerals and vitamins, all others are meant exclusively for patients. All ayurvedic drugs, on the other hand, can be given to both patients and healthy individuals simultaneously—in patients they cure diseases and

in healthy individuals they prevent disease and promote positive health. To illustrate the point : *vāsā* (*Adhatoda vasica* Nees) is very often prescribed by ayurvedic physicians to a patient suffering from bronchitis, laryngitis, pharyngitis and even tuberculosis. May be, some fractions of this drug have properties to kill some of the organisms causing these ailments. But that is not the primary consideration which motivates the physician to prescribe this drug. These organisms thrive and multiply to produce a disease in the respiratory tract and throat only when the local tissue elements are afflicted with excessive *kapha dosa*. *Vāsā* counteracts this aggravated *kapha doṣa*, and helps in the maintenance of its state of equilibrium in the body by which the organisms become incapable of producing these ailments.

In ayurveda the treatment prescribed does not aim at correcting the afflicted part alone. In the process of manifestation of the disease several organs are involved. The disease takes its origin from a particular place. It moves through a particular channel and then gets manifested in a particular organ. Therefore, the treatment always aims at correcting the site of origin, the channels of circulation along with the site of manifestation of the disease—all together. Take for example, the treatment of bronchial asthma which in ayurvedic parlance is known as *tamaka śvāsa*. The breathing difficulty in the disease is caused by the spasm of the bronchi, and to relieve it, antispasmodic drugs are generally prescribed in modern medicine. But the aim of the ayurvedic treatment of this disease is different. May be, some ayurvedic drugs used against this disease have this antispasmodic effect which can be demonstrated even in animals under experiment. But most of the drugs which are used in this treatment will not produce any anti-spasmodic effect and a pharmacologist will be at a loss and reject them as useless in the treatment of bronchial asthma. A clinician, on the other hand, will appreciate its effects on his patients even though he may not be able to explain their effects in terms of modern physiological and pathological concepts. This disease takes its origin from the stomach and small intestine. The primary aim of the ayurvedic physician is to correct these two organs either by

giving emetic therapy, or by giving such medicines which will keep the bowels clean. *Haritakī* (*Terminalia chebula* Retz.) along with other medicines is useful in correcting these two organs of the body, and therefore, all preparations indicated for the treatment of bronchial asthma invariably contain *haritakī* and other drugs having identical properties.

These four topics on (1) the basic concepts regarding the creation of the universe; (2) composition of the human body; (3) drug composition and (4) the mechanism of drug action, described above are very important to the understanding and appreciation of the materia medica of ayurveda. At times, research workers, in their enthusiasm to develop the new drug from the plant sources, chemically and pharmacologically screen the drugs prescribed in the ayurvedic materia medica without paying any attention to these basic concepts and peculiar features of the system. They try to isolate alkaloids, glycosides and other similar active principles from these drugs. These so called active principles are often not found in some of these ayurvedic drugs and when they are found they do not necessarily produce the results which are attributed to the whole drug in the ayurvedic materia medica. No wonder, therefore, that the scientists are disappointed at the end of their hard labour and after considerable expenditure from the State exchequer. Sometimes they come to an erroneous conclusion that all ayurvedic drugs or at least most of them are therapeutically useless. This disappointment and wrong conclusion could be avoided if the research on ayurvedic drugs is planned and designed in the beginning, keeping in view these fundamental principles of ayurveda on drug composition and drug action.

In the present text on ayurvedic materia medica, only the single drugs—their synonyms and properties are described along with a few compound recipes, food articles and drinks. In actual ayurvedic practice, along with the single drugs, a number of compound preparations are used. These single drugs and compound preparations which are in use in ayurvedic therapeutics are not free from shortcomings.

Classification of Ayurvedic Drugs

In Ayurveda, more than 8000 medicines—single drugs and compound preparations—have been described. In general, these ayurvedic drugs can be classified into five categories as follows :

(a) *Scientifically Studied Drugs* : Some single drugs and compound preparations, for example, *sarpa gandhā* and *yoga-rāja guggulu* have been studied scientifically and their therapeutic claims verified. *Sarpa gandhā* is useful for high blood pressure and *yoga rāja guggulu* for rheumatism. The gum resin of a plant called *guggulu* is the important ingredient of the latter medicine.

(b) *Popular Non-toxic Drugs* : Some ayurvedic medicines are popular for their therapeutic utility and of non-toxic character. One such medicine is *Cyavana prāśa*. *Āmalakī* is the important ingredient of this medicine which is useful in treating chronic diseases of the lungs like chronic bronchitis.

(c) *Effective but Toxic Drugs* : There are some drugs for example, *bhallātaka avaleha*, which have known therapeutic value but which also produce severe toxicity, if used injudiciously. *Bhallātaka* is the important ingredient of this medicine which is used in the treatment of chronic and obstinate skin diseases, among others.

(d) *Drugs of Rare Use* : Some drugs, for example, *Śrī viṣṇu taila*, though mentioned in ayurvedic classics, are not in extensive use. Only physicians of certain regions of India use them and claim their efficacy.

(e) *Hereditary and Patent Drugs* : Some physicians have specialised in curing certain diseases. The formulae and methods of preparation of the drugs they administer are known only to them or to the trusted members of their family. While some of the drugs are not as effective as the claims made for them, some others are found to be very effective. In most cases, physicians are not at all willing to disclose the formulae; and even if they give consent, it is associated with a demand for heavy financial compensation.

Need For Standardization

In olden days, the physician was rarely required to be consulted for minor ailments because the senior members of every family were well acquainted with the use of herbs available in their vicinity for treating such ailments. The physician's role in such cases was only to guide the family members to obtain the correct herb, to process it properly and to instruct the patient about the dietetic and other regimen to be followed. Only serious cases were brought to the physician for direct supervision, and in such cases, he had to prepare his own medicines. Things have changed now. At present, the physician is approached even for a minor ailment. People generally are not interested in knowing common household remedies or they do not believe in their efficacy. Thus, ayurvedic physicians, like modern doctors, have become busy practitioners who are also hard pressed for time to prepare their own medicines. Even for dispensing, these physicians are dependant entirely upon their compounders. As a result, many big commercial firms supplying medicines to ayurvedic physicians have come into existence. This, in turn, has led to a number of problems as follows :

(a) *Collection of Premature Herbs* : For therapeutic purposes different parts of medicinal plants are required to be used which are to be collected during specified periods. For example, *āmalakī* should be collected only when the fruits are fully ripe. Annual plants should be collected before the ripening of seeds, biennials during spring and perennials during autumn. Twigs must be of the first year's growth and roots, leaves and bark should be collected in the cold, hot and rainy seasons respectively. These instructions are seldom followed during the actual collection of herbs by large manufacturers of ayurvedic medicines.

(b) *Improper Processing and Preservation*: Usually, raw drugs are stored for some time before they are processed. Proper care in processing and preservation is required so that the active principles of the drugs may not get deteriorated. Dumping them in bundles or in gunny bags, and keeping them exposed

to sun, rain and dust, adversely affect their therapeutic effectiveness.

(c) *Methods of Preparation* : Various methods are indicated in ayurvedic texts for the preparation of the same medicine. While some of the methods involve much time and labour, some others are less expensive. For reasons of economy, quite a few pharmacies follow the less expensive methods or develop some methods which make their products less expensive with no guarantee that the drugs so prepared are equally effective. According to ayurvedic texts, raw oil has to be processed before it is used for the preparation of medicated oil. This processing is known as *mūrchanā*. Pharmacies very rarely resort to this processing and in the absence of standard methods for testing these discrepancies in their drug preparation, the physicians cannot be sure about the effectiveness of the drugs they prescribe.

(d) *Use of Adulterated and Sub-standard Drugs* : Therapeutically important drugs like *vatsa nābha* and *yaṣṭi madhu* are often adulterated and sold in the market at a comparatively cheaper price. In the absence of any effective control over the sale of adulterated and spurious drugs, the dealers take full advantage and sell to their customers anything that resembles, or is made to resemble the genuine drug. The art of adulteration and preparation of spurious drugs has advanced to such an extent that even the most experienced among the *vaidyas* finds it difficult to distinguish between genuine and spurious samples. Ayurvedic physicians as well as commercial firms are often cheated and supplied with adulterated stuff. This obviously results in the circulation of sub-standard drugs in the market:

(e) *Substitution of Costly Drugs* : In some ayurvedic texts, of late, *pratinidhi dravyas* or official substitutes of many costly drugs have been prescribed; for example, *kuṣṭha* can be used in place of *pūṣkara mūla* and *gaja pippali* in the place of *cavya*. Instead of treating these usages as exceptional cases, the substitutes are often unscrupulously used as a rule (under the shelter of textual prescriptions) to make the medicinal preparations cheaper.

(f) *Omission of Ingredients*: Generally speaking, compound preparations are used in ayurvedic medicines. It is often the total effect of all the ingredients in the formula rather than the action of individual drugs that plays a vital role in therapeutics. Drug combinations are envisaged to serve the following important purposes :

(i) *Synergistic action* : *Tṛṇa-pañca-mūla-kvātha* presents a case of synergistic action. Even though all the ingredients of this group are known to be diuretics, still when given together, they produce marked diuresis which effect is not observed in individual drugs.

(ii) *Combined action* : The case of *Rāsnā-saptaka-kvātha* used for the treatment of rheumatic afflictions is illustrative of the combined action of an ayurvedic medicine. For curing rheumatism, which is known in ayurveda as *āma vāta*, the medicine should have sedative, digestive, laxative and anti-inflammatory action. Of all the ingredients of this drug, *rāsnā* is anti-inflammatory and sedative, ginger promotes digestion, and the root of *eraṇḍa* is a laxative.

(iii) *Neutralizing toxicity* : An example of this is the case of *Agni tundi vaṭi*. *Kupīlu* is an irritant to the nerves. It cannot be taken alone in a heavy dose as is required to make it therapeutically effective. But it is well tolerated when taken in combination with other drugs, specially after undergoing *śodhana*.

(iv) *Specific Action* : An example of this is the case of *Cyavana prāśa*. *Pippalī* added to this preparation has heating effect in addition to anti-tubercular property. The heating effect of the preparation is neutralized by the addition of other cooling drugs like *āmalakī*. Thus, the medicine is left with a marked anti-tubercular effect.

Keeping the above points in view, various formulae have been described for medicinal preparations in ayurvedic classics. Due to non-availability of drug ingredients or the expense involved, if any ingredient is accidentally or intentionally omitted from the preparation then not only is the efficacy reduced but adverse effects may also be produced at times.

(g) *Improper Storage* : Different categories of ayurvedic preparations which remain effective for a certain limited period are described in the classics. If these drugs are kept for a longer period, they lose their potency. Large manufacturing concerns, however, cannot help neglect this rule; for, the drugs prepared cannot be consumed immediately but will have to be sent to their various branches. Hence, there is considerable lapse of time before the medicine is actually used by the patient.

Identification of Raw Drugs

It is difficult to correctly identify certain drugs described in ayurvedic classics due to the following reasons :

(a) *Non-availability* : Some drugs like *Soma* and *Jivaka* are not available now a days. It is probable that they have become extinct.

(b) *Multiplicity of Names* : In ayurvedic classics, drugs are often described with synonyms. Synonyms apart, the same drug is known by different names in different parts of the country. For example, *Clitoria ternatea* Linn. which is known in North India as *aparā jitā*, is called *śamkha puṣpī* in South India. But these two have distinct and different therapeutic attributes or characteristics.

(c) *Many Drugs with Same Name* : Under the name of *rāsnā*, thirteen different drugs are being made use of in different parts of the country for medicinal preparations.

(d) *Non-availability of Specific Varieties* : The drug *harītakī* is said to be of seven varieties. But presently, not more than four varieties are available. So is the case with other drugs like *bhṛṅgarāja* and *dūrvā*.

(e) *Exotic Plants* : Some plants, though introduced in India very recently, have grown profusely. Due to lack of proper knowledge, some of these plants have been given ayurvedic names which have led to their wrong identification.

For example, *Argemone mexicana* Linn. is often mistaken for *svarṇa-kṣīrī*.

(f) *Adulteration* : Because of short supply, drugs, such as *yaṣṭi-madhu*, are often adulterated.

(g) *Synthetic Preparations* : Taking advantage of the heavy demand from consumers of certain drugs, such as *vaṁśa locana* or bamboo salt, some firms have started manufacturing imitations and synthetic preparations the therapeutic efficacy of which is in no way comparable to that of the genuine drug.

Difficulties for Identification

Most of the ayurvedic drugs can be identified conveniently. But there are some, which elude proper identification because of the following reasons :

(a) *Passage of Time* : Ayurvedic classics were written about 3000 years ago. Some of the drugs described at that time may have undergone modifications due to physical and genetic factors and some others may have become extinct. Thus, identification of a drug from the physical characteristics mentioned in the ayurvedic texts or commentaries thereon is not an easy task. The plant *soma*, which is mentioned even in the Vedas, is described by Suśruta as having 15 leaves in total. On new moon day, the plant, becomes leafless and every day thereafter, one leaf is added to it till it has 15 leaves on full moon day. Its root is said to contain a large quantity of an exhilarating sweet juice. Plants of this description are not, however, to be seen now.

(b) *Inadequate Description* : An important plant by name *svarṇa-kṣīrī* is described as having golden latex and leaves like those of *sārivā*. This is said to grow in the Himalayas. This information is, however, very inadequate for identifying the plant correctly. Whether the contributors to the ayurvedic classics had a knowledge of systematic botany or not is a debatable point; but when these texts were compiled, there was no printing facility, so much so that brevity was always the rule in describing ayurvedic drugs.

(c) *Loss of Contact* : In olden days, learning had to be done through *guru-śiṣya paramparā*, which meant that the disciple had to seek and obtain first-hand knowledge from teachers. But with the advent of foreign influence, this traditional way of learning has been given up. Due to the inadequacy of written texts and the absence of direct links to gain deeper knowledge of the ayurvedic classics, it became difficult for later authors to appreciate what has been originally stated in the classics; and this has resulted in incoherent views. Personal knowledge of drugs available in various surroundings has become so meagre that ayurvedic physicians are often required to seek guidance from cow-herds and forest dwellers for the identification of such drugs.

(d) *Lack of Facility* : Even the available knowledge is not properly codified. Descriptions of plants and animals are also available in texts allied to ayurveda, such as *Smṛti śāstras* and *Dharma śāstras*. They are required to be critically screened.

(e) *Observance of Secrecy* : In the medieval period, in order to prevent the acquisition of ayurvedic knowledge by foreign invaders and unscrupulous natives, names having more than one meaning and also with allegorical meanings have been used in the texts. Due to the rigidity observed in the selection of disciples, some authors died without training even a single disciple and the knowledge acquired by them had thus been lost.

(f) *Short Supply* : Some important raw drugs, such as musk and bamboo salt, are in short supply. Hence, their prices are not only very high but spurious substitutes for them are also largely sold in the market.

Procedure for Naming Formulae

The names of the drug formulations are usually based on the following six factors :

(a) *Important Ingredient* : Some preparations are named after the important ingredient, for example, *Āmalakī rasāyana*.

(b) *Authorship* : The name of the sage or *ṛṣi* who first discovered or patronized the formula is used in naming the drug, for example, *Agastya harītakī*.

(c) *Therapeutic Property* : The disease for which the formula was indicated is at times used in naming the preparation, for example, *Kuṣṭhi,aghna lepa*.

(d) *First Ingredient of the Formula* : The drug that heads the list in the formula is sometimes used in naming the preparation, for example, *Pippalyāsava*.

(e) *Quantity of Drug* : At times, the preparation is named after the quantity of drug used, for example, *Ṣaṭpala ghrīta*.

(f) *Part of the Plant* : The drug is at times named after the part of the plant used, for example, *Daśa mūla kaṣāya*.

Multiplicity of Formulae

There are medicines having the same name but a number of different formulae, so much so that each differs from the other in composition, ratio of ingredients, method of preparation, mode of administration, mode of action, dosage and *anupāna*. Take, for example, *khadirādi vaṭi*. It has as many as eight formulae. In this preparation, the number of ingredients varies from 5 to 37, and the percentage of the main ingredient, namely, *khadira* (catechu) varies from 15 to 92. In four out of the eight formulae, costly drugs like *kasturī* or musk are added, the percentage of musk varying from formula to formula. In one formula, poisonous drugs like *bhallātaka* and *bākuci* are added as they are considered to be effective in obstinate skin diseases including leprosy. Thus, standardization of such medicines, which must also take into account of these variations, poses a very difficult problem.

Pharmaceutical Processes

In ayurveda, different pharmaceutical processes are followed in the preparation of drugs. Besides helping isolation of the

active fraction of the drugs, these processes help make the medicines:

- (a) easily administrable,
- (b) tasteful,
- (c) digestible and assimilable,
- (d) therapeutically more effective,
- (e) less toxic and more tolerable, and
- (f) more preservable.

Śodhana or Purification

Some raw drugs are required to be used after *Śodhana*. The literal meaning of the word *śodhana* is purification. But this is often misinterpreted to mean that the substance is rendered physically and chemically pure. *Śodhana*, no doubt, brings about physical and chemical purity to some extent but at times more physical and chemical impurities are added to the substance during certain stages of this processing. By such additions, the drug becomes less toxic and therapeutically more effective. Pure aconite, for example, cannot be administered so freely as *śodhita* aconite. Aconite, which is a cardiac depressant, becomes a cardiac stimulant after *śodhana* with cow's urine. Thus, the actual implications of *śodhana* processes require detailed study.

Some gum resins, such as *guggulu* and some drugs containing volatile oils, such as *kusṭha* are also described to undergo *śodhana* by boiling them with milk, *go-mūtra*, etc. Boiling of these drugs however, definitely reduces the volatile oil content which is supposed to be therapeutically very active. The utility of such purificatory processes should, therefore, be studied before proceeding with the standardization of ayurvedic drugs.

Ayurveda should not be viewed from the point of history of medicine alone. It is both history and medicine. No doubt, there is a history of thousands of years behind it, but it is even now a living medical system catering to the health needs of millions of people living in India, Śrī lankā and Nepāl

including some of the Central Asian and South East Asian countries. There are several hundreds of trained and registered practitioners of ayurveda in these countries and people have implicit faith in the therapeutic efficacy of the drugs and therapies of this system. Like other medical systems it has, of course, its limitations. Advanced civilization and modernisation have not left ayurveda untouched. Accidental human errors and intentional profit motives coupled with the vicissitudes of time have created several problems for this system of medicine. Therefore, the Ayurvedic drug that is found in the market may not carry the same therapeutic effect as is claimed for it in the ayurvedic texts. The reasons for this are elaborated in the last eight topics of this 'Introduction' for the guidance of research workers, practitioners and well wishers of this system. The ayurvedic materia medica provides a rich storehouse of therapeutically effective drugs and these gems are to be selected with due care for mitigating the miseries of the suffering humanity."

Attributes of Sweet taste

Sweet taste is cooling, promoter of the growth of tissue elements (*dhātus*), lactation (*stanya*) and strength. It promotes eyesight (*cakṣuṣya*), alleviates *vāyu* and *pitta*, and causes obesity, excessive production of waste products (*mala*) and *kṛmi* (parasites). It is useful for children, old men and persons suffering from consumption and emaciation. It is also useful for complexion, hair, sense organ and *ojas*. It is nourishing and promoter of voice. It is heavy (*guru*) and it helps in uniting the broken or torn tissues (*sandhānakṛt*). It is anti-toxic, slimy (*picchila*) and unctuous (*snigdha*). It is conducive to pleasant feeling and longevity.

[भावप्रकाशः पूर्वखण्डः वर्गप्रकरण ६ : १८५-१८६]

Attributes of Pungent taste

Pungent taste aggravates *pitta* and reduces *kapha*, *kṛmi* (parasitic infection), *kanḍū* (itching) and toxicity. It has properties of fire (*agni*) and it aggravates *vāyu*. It reduces *stanya* (lactation), *medas* (fat) and *sthaulya* (adiposity). It is light. It causes lacrimation and irritates nose, eyes, mouth and tip of the tongue. It is *dīpana* (stimulant of digestion), *pācana* (carminative) and *rucya* (appetiser). It causes dryness (*śoṣaṇa*) of the

nose. It depletes (*śoṣaṇa*) *kleda* (sticky substance in the body), *medas* (fat), *vasā* (muscle fat), *majjā* (bone marrow), *śakṛt* (feces) and *mūtra* (urine). It opens up the channels of circulation. It is ununctuous (*rukṣa*). It promotes intellect (*medhya*). It produces more of feces and constipation.

Attributes of Bitter taste

Bitter taste is cooling and it cures morbid thirst, fainting and fever. It alleviates *pitta* and *kapha*. It cures *kṛmi* (parasitic infection), *kuṣṭha* (obstinate skin diseases including leprosy), *viṣa* (poisoning), *utkleśa* (nausea), *dāha* (burning sensation) and diseases caused by the vitiation of blood. Even though bitter taste itself is not relishing it is an appetiser. It cleanses the throat, lactation and mouth. It aggravates *vāyu* and stimulates *agni* (enzymes responsible for digestion and metabolism). It dries up the nose. It is ununctuous and light.

सोऽतियुक्तः शिरःशूलमन्यास्तम्भश्चमार्त्तिकृत् ।

[भावप्रकाशः पूर्वखण्डः वर्गप्रकरण ६ : १८८-१९१]

When used in excess, it causes *śiraḥ śūla* (headache), *manyāstambha* (torticolis), *śrama* (exhaustion), *artī* (pain), *kampa* (tremor), *mūrchā* (fainting) and *tṛṣā* (morbid thirst). It reduces strength and semen.

अथ कषाय :

कषायो रोपणो ग्राही शोषणो वातकोपनः ।

जिह्वाजाड्यकरः कण्ठस्रोतसां च विबन्धकृत् ।

Attributes of Astringent taste

Astringent taste is healing (*ropaṇa*), constipative (*grāhī*) and drying (*śoṣaṇa*). It aggravates *vāyu*. It causes sluggishness in the movement of the tongue and it obstructs the throat as well as the channels of circulation. It causes constipation.

‘सोऽतियुक्तो ग्रहाध्मानहृत्पीडाक्षेपणादिकृत्’ ॥ २३ ॥

[भावप्रकाशः पूर्वखण्डः वर्गप्रकरण ६ : १६४]

When used in excess it causes *graha* (obstruction), *ādhmāna* (tymphanitis), *hṛtpidā* (pain in cardiac region), *ākṣepaṇa* (convulsions) etc.

All sour things aggravate *pitta* except *dhātrī* and *dāḍima*. Generally saline things afflict eyesight; but rock salt (*saindhava*) is an exception to it. Generally pungent and bitter things are not aphrodisiac and they aggravate *vāyu*. *Sunṭhī*, *kṛṣṇā*, *rasona*, *paṭola* and *amṛtā* are, however, exceptions. All astringent things are generally *stambhana* (constipative); but *abhayā* is an exception to this rule.

Vīrya (Potency)

Vīrya (potency) is of two categories viz., *uṣṇa* (hot) and *śīta* (cold). They are inherent in matter. They represent the *agni* and *soma* principles of the three worlds.

अथ-तद्गुण :

उष्णं वातकफौ हन्यात्पित्तं तु तनुते तराम् ।

शीतं वातकफात्क्लान्कुरुते पित्तहृत्परम् ॥ ३२ ॥

[भावप्रकाशः पूर्वखण्डः वर्गप्रकरण ६ : २३८—२३९]

Their attributes

Those having *uṣṇa* (hot) potency alleviate *vāta* and *kapha* and they aggravate *pitta*.

Those having *śīta* (cooling) potency cause diseases of *vāyu* and *kapha*; but they alleviate *pitta*.

अथ विपाक :

[भावप्रकाशः पूर्वखण्डः वर्गप्रकरण ६ : २४६—२४७]

Prabhāva or specific action

The examples of *prabhāva* are *dhātrī* and *lakuca*. They have similar *rasa* (taste) etc. But the former alleviates all the three *doṣas* whereas the latter does not.

क्वचित्तु केवलं द्रव्यं कर्म कुर्यात् प्रभावतः ।¹³

The names of different varieties of *harītakī* have the following significance ;

- (a) *Jīvantī* because it promotes life (*jīvana*) ;
- (b) *Pūtanā* because it purifies (*pāvana*) ;
- (c) *Amṛtā* because it is like ambrosia (*amṛta*) ;
- (d) *Vijayā* because it endows the user with victory (*vijaya*) ;
- (e) *Abhayā* because it takes away fear (*bhaya*) ;
- (f) *Rohiṇī* because it promotes (*rohāt*) the attributes (*guṇas*) ;
- (g) *Cetakī* because it promotes consciousness (*cetanā*).

Use in different seasons

In different seasons *harītakī* should be used as follows :

- (1) In summer it should be used with equal quantity of *guḍa* ;
- (2) In rainy season it is to be used with adequate quantity of *saindhava* ;
- (3) In autumn season it is to be used with equal quantity of purified sugar ;
- (4) In the beginning of winter it is to be used with *śunṭhī*.
- (5) In the later part of winter it is to be used with *pippalī*.
- (6) In the spring season it should be mixed with honey and then used.

Origin and description of Gold

Mythology

In the days of yore, *Jātavedas* (Agni or Fire god) became passionately excited when he saw the extremely beautiful, auspicious and youthful wives of the self controlled seven sages (*Saptarṣis*) in their hermitages. The semen he, thus, ejaculated fell upon the earth which became gold. Gold is also prepared artificially by the *vedhana* (a specific method of processing) of mercury.

149

150

तार शुक्वोत्थितं स्निग्धं मृदु तद्गुरु शस्यते ।

Good quality

The gold which becomes red when burnt, white when cut and like saffron when rubbed over *nikāṣa* (a specific type of stone used for testing the genuineness of gold), which is prepared out of silver or copper and which is unctuous, soft and heavy is the best.

151

153

दाहे छेदेऽसितं श्वेतं घर्षेऽस्फुटं लघु त्यजेत् ।

Bad quality

The gold which is partially white, hard, ununctuous and discoloured, which is associated with impurities, which has pieces like leaves, which becomes black in burning or cutting, which does not produce clear colour when rubbed over *nikāṣa* and which is light should not be used in medicine.

Property

Gold is cooling, aphrodisiac, strength promoting, heavy, rejuvenating, sweet in *vipāka* and taste, bitter, cardiac tonic exceedingly depleting (*vara lekhana*), *pavitra* (remover of sins), nourishing and promoter of eye sight. It purifies intellect and memory, and promotes longevity. It also purifies complexion and voice. It causes steadiness. It cures both the types of *viṣa* (poisoning), *kṣaya* (consumption), *unmāda* (insanity), vitiation of all the three *doṣas*, *jvara* (fever) and *śoṣa* (phthisis).

Silver

Mythology

When lord *Śiva*, full of anger, looked without twinkling of eyes for killing the demon *Tripura*, then from one of his eyes a meteor (*ulkā*) fell down which gave birth to *Rudra* who was dazzling like fire. From the left eye drops of tears fell down which gave birth to silver and this is used for all different purposes.

160

Tāmra (Copper)

Mythology

According to scholars well versed in the *purāṇas*, the semen of *Kārtikeya* which fell on the earth gave rise to *tāmra* (copper).

167

कृष्णं रुक्षमतिस्तब्धं श्वेतं चापि घनासहम् ।

Properties

Copper is astringent, sweet and bitter. It is *ropaṇa* (healer of ulcers) and slightly *bīṃhaṇa* (nourishing). It cures aggravated *pitta*, *udara* (obstinate abdominal diseases including ascitis), *arśas* (piles), *kṛmi* (parasitic infection), *kuṣṭha* (obstinate skin diseases including leprosy), *pīṇasa* (chronic rhinitis), aggravated *kapha*, *kṣaya* (consumption), *jvara* (fever) and *sūla* (colic pain). It is cooling.

Adverse effects

Poison is not the real poison. It is copper (not processed properly) which is the real poison. Poisons have only one adverse effect whereas copper (which is not processed properly) has eight types of adverse effects. These are *bhrama* (giddiness), *mūrcchā* (fainting), *vidāha* (burning sensation), *sveda* (excessive sweating), *utkledana* (production of stickiness in the body), *vānti* (vomiting), *aruci* (anorexia), *citta santāpa* (excessive discomfort in mind)—these are the eight types of adverse effects which are like poisoning effects.

Nāga (Lead)

Mythology

The semen ejaculated by *Vāsuki* after seeing the beautiful daughter of Bhogi gave rise to *nāga* (lead). It cures all diseases of human beings.

सीसं वंगगुणं ज्ञेयं विशेषान्मेहनाशनम् ॥ २३८ ॥

[आयुर्वेदप्रकाश ३:१८५]

Property

Nāga shares all the properties of *vanga*. However, the former specifically cures *meha* (obstinate urinary disorders including diabetes).

Adverse effects

Use of *nāga* (lead) and *vanga* (tin) without proper processing causes *kuṣṭha* (obstinate skin diseases including leprosy), *gulma* (phantom tumour), *atikuṣṭha* (?), *pāṇḍu* (anemia), *prameha* (obstinate urinary disorders including diabetes), *śopha* (oedema) caused by *vāyu*, *bhagandara* (fistula-in-ano), *śvitra* (leucoderma), *kilāsa* (a type of leucoderma) and *śūla* (colic pain). They are like poisons and cause *rakta vikāra* (diseases caused by the vitiation of blood), *kṣaya* (consumption), *kṛcchra*

(dysuria), aggravation of *kapha*, *jvara* (fever), *aśmarī* (stone in urinary tract), *vidradhi* (abscess), *mukharoga* (diseases of mouth), *arti* (pain) and *nitya abalatva* (progressive weakness).

Property

Loha is bitter, laxative, cooling, astringent, sweet, heavy, ununctuous, *vayasya* (promoter of longevity) and *cakṣuṣya* (promoter of eye sight). It aggravates *vāyu* and alleviates *kapha* and *pitta*. It cures *gara* (poisoning), *śūla* (colic pain), *śopha*

(oedema), *arśas* (piles), *plīhan* (splenic disorder), *pāṇḍutā* (anemia), *medas* (adiposity), *meha* (obstinate urinary disorders including diabetes), *kṛmi* (parasitic infection) and *kuṣṭha* (obstinate skin diseases including leprosy).

Its *kitta* which is called *maṇḍūra* (rust of iron) shares all the properties of iron.

गुरुता दृढतोत्क्लेद कश्मलं दाहकारिता ।

Abhraka (Mica)

Mythology

In the days of yore, when *Vajri* (*Indra*) took out the *vajra* to kill the demon *Vṛtra*, then *visphulingas* (fire particles) from

that *vajra* spread over the sky and because of the thundering sound of the clouds fell on the tops of mountains. Thus, *abhraka* took birth in those mountains.

Quality

Abhraka which is available in the southern mountains is inferior in quality because it gets dried by the strong heat of the sun. It produces less of *sattva*. However, this *sattva* is therapeutically useful.

अस्तूत्तरशैलोत्थं बहुसत्त्वं गुणाधिकम् ।

Abhraka which is available in northern mountains contains more of *sattva* and is therefore superior in quality.

189

190

गगनात्पतितं यस्माद्गगनं च ततो मतम् ।

Derivation

It is called *vajra* because of its origin from thunder (*vajra*). It is called *abhra* because it is produced with the help of the cloud (*abhra*). Since it has fallen from the sky (*gagana*), it is called *gagana*.

Variety

It is of four types viz., *vipra*, *kṣatriya*, *viṭ* and *sūdra* and they are white, red, yellow and black respectively. The white variety is useful in the preparation of silver, red variety for rejuvenation therapy, yellow variety in the preparation of gold and the black variety for the treatment of diseases as well as for *druti kriyā*.

It is also classified in four different ways viz., *pināka*, *dardura*, *nāga* and *vajra*. When placed on fire, the *pināka* variety of *abhraka* gives up leaves, and if because of ignorance, it is used, then it causes serious types of *kuṣṭha* (obstinate skin diseases including leprosy). The *dardura* variety of *abhraka* when placed on fire produces sound like a frog. It produces many *golakas* (abscesses?) and thus leads to death. The *nāga* variety of *abhraka* produces hissing (*phutkāra*) sound like that of a cobra, when placed on fire. This, when used, certainly produces *bhagandara* (fistula-in-ano). The *vajra* variety of *abhraka* stands on the fire like a *vajra* (thunder) without under-

going any change. Amongst all these varieties, the *vajra* type of *abhraka* is the best and it overcomes diseases, old age and even death.

Property

Abhraka is astringent, sweet, exceedingly cooling and promoter of longevity and *dhātus* (tissue elements of the body). It alleviates all the three *doṣas* and cures *vraṇa* (ulcer), *meḥa* (obstinate urinary disorders including diabetes), *kuṣṭha* (obstinate skin diseases including leprosy), *pliḥan* (splenic disorders), *udara* (obstinate abdominal diseases including ascitis), *granthi* (adenitis), *viṣa* (poisoning) and *kṛmi* (parasitic infection).

Viṣa (Poisons)

Mythology

A powerful demon, who was created by *Brahmā*, created disturbance in the performance of rituals by the latter. Then *Brahmā*, the abode of all the powers (*tejas*) became very angry and from his mouth the terrifying anger came out in a corporeal form (*vigrahavān*) and fell on the roaring powerful demon and burnt him. After his death, that flame surprisingly expanded. Looking at this, the gods became exceedingly sad. Because of its property to cause sorrow (*viṣāda*), it is called *viṣa*. Then being requested by the remaining subjects, *Īśvara* withdrew that flame of anger and placed it in *sthāvaras* (those who do not move like vegetable kingdom, stone etc.,) and *cara* (those who move like animal kingdom).

यथाऽव्यक्तस्सं तोयं आन्तरिक्ष महीगतम् ॥३२८॥

तेषु तेषु प्रदेशेषु रसं तं तं नियच्छति ।

एवमेव विषं यच्च द्रव्ये व्याप्यावतिष्ठते ॥३२६॥

स्वभावादेव तत्तस्य रस समनुवर्तते ।

As the rain water which has no manifested taste while in the sky, carries different types of tastes when it falls on the earth and comes in contact with different types of soil, - similarly the *viṣa* acquires the taste of the substance in which it resides.

विषे यस्माद्गुणाः सर्वे तीक्ष्णाः प्रायेण सन्ति हि ॥३३०॥

विषं सर्वमतो ज्ञेयं सर्वदोषप्रकोपनम् ।

Property

All the properties of *viṣa* are super imposed by sharpness (*tīkṣṇa*). Therefore, all types of poisons aggravate all the three *doṣas*.

238

Chātra

Chātra type of *madhu* is sweet in *vīpāka*, heavy, cooling and slimy. It cures *raktapitta* (a diseases characterised by bleeding from different parts of the body), *śvitra* (leucoderma), *meha* (obstinate urinary disorders including diabetes) and *kṛmi* (parasitic infection). It is of superior quality.

Madhu in general

Madhu in general cures *medas* (fat) and *sthaulya* (obesity). It is constipative and when preserved for a long time (*purāṇa*), it is exceedingly depleting. It is a mixture of many drugs; therefore, it cures many diseases. In view of its association with many drugs it is known to be *yogavāhin* (which enhances the property of other drugs). It alleviates all the three *doṣas* when properly digested. If *āma* is produced by its improper digestion it vitiates all the three *doṣas*.

Adverse effect

In a person who is afflicted with heat and during the summer season, *madhu* works like a poison.

तथान्तरिक्षेण जलेन वापि ॥ १३ ॥

Madhu is tender (*sukumāra*) and cooling. It is produced by the mixture of the juices (*rasa*) of many drugs. Therefore, it is specifically opposed to heat. It also produces adverse effects when used by mixing with rain water (?).

उष्णेन मधु संयुक्तं वमनेष्ववचारितम् ।

अपाकादनवस्थानात्¹² विरुद्धेत्त[न्न] पूर्ववत् ॥ १४ ॥

In emetic therapy, *madhu* is mixed with hot water and administered. It does not produce any adverse effect because it does not stay in the stomach (comes out along with vomiting), and therefore, does not get digested to produce such an effect.

Combination

Salt should not be used in combination with either honey or milk. Honey and ghee should never be used together in equal quantities.

॥ इति मधुवर्गः ॥

When honey and ghee are used in equal quantities but mixed with other drugs, then such a combination, according to scholars, does not produce any adverse effect.

Thus ends the group of different types of *madhu*.

Variety

The first stage of *dadhi* is called *manda* (in which there is

no manifested taste). The second stage of it is called *svādu* (sweet) and the third stage is *svādvamla* (both sweet and sour in taste). During the fourth stage it is called *amla* (sour) and the fifth stage is called *atyamla* (excessively sour). These are the five varieties of *dadhi*.

Properties in general

Takra works like ambrosia in winter season, when there is suppression of the power of digestion, in the diseases caused by *kapha* and *vāyu*, in *aruci* (anorexia) and *srotorodha* (obstruction to the channels of circulation). It cures diseases caused by *kapha*, *chardi* (vomiting), *praseka* (salivation), *viṣama jvara* (irregular fever), *pāṇḍu* (anemia), *medas* (adiposity), *grahaṇī* (sprue syndrome), *arśas* (piles), *mūtragraha* (suppression of urination), *bhagandara* (fistula-in-ano), *meha* (obstinate urinary disorders including diabetes), *gulma* (phantom tumour), *atīśāra* (diarrhoea), *śūla* (colic pain), *plīhan* (splenic disorder), *udara* (obstinate abdominal disorders including ascitis), *arucī* (anorexia), *śvitra* (leucoderma), *koṭha* (urticaria), *ghṛta vyāpat* (complications arising out of improper use of ghee), *kuṣṭha* (obstinate skin diseases including leprosy), *śopha* (oedema), *trṣā* (morbid thirst) and *kṛmī* (parasitic infection),

Excellence

A person who habitually takes *takra* never suffers and being impregnated with *takra*, diseases do not attack him. As

Madya (Alcoholic drinks)

Alcoholic drink (*madya*) is a digestive stimulant, appetiser, sharp, *uṣṇa*, refreshing, nourishing, sweet, *tikta*, pungent, sour in *vipāka* and taste, laxative and astringent. It promotes good voice, health, intuition (*pratibhā*) and complexion. It is light. It is useful for persons who do not get sleep and also for persons who get sleep in excess. It vitiates *pitta* and blood. It is useful for both emaciated and corpulent persons. It is un-unctuous and subtle. It cleanses the channels

of circulation. It alleviates *vāyu* and *kapha*. All the above mentioned properties are manifested when alcohol is taken only in appropriate dose. Otherwise it works like a poison.

Water

General properties

Water removes physical and mental fatigue, *mūrchā* (fainting), thirst, *tandrā* (drowsiness) and *svapna* (sleep). It promotes strength. It is life giving, refreshing and caradiac tonic. It has unmanifested tastes. It cures indigestion. It is wholesome par excellence. It is cooling, light and like ambrosia. It helps in the manifestation of all tastes. It cures *chardī* (vomiting).

अथ तद्भेदा :

पानीयं प्रथमं प्रोक्तं दिव्यं भौममिति द्विधा ।

Varieties

Water is first classified into two categories viz., *divya* (which falls from the sky) and *bhauma* (which is available on the earth).

The former type of water has no manifested taste. It is life-giving, refreshing, light and rejuvenating. It cures *tr̥ṣā* (morbid thirst), *mūrchā* (fainting), *tandrā* (drowsiness), *dāha* (burning syndrome) and *klama* (mental fatigue). It is *saumya* (cooling) and carminative. It promotes strength and cures *mada* (intoxication), *nidrā* (excessive sleep) and vitiation of all the three *doṣas*. It gives consolation and happiness. It removes physical fatigue and promotes intellect.

Classification of *divya* type of water

Divya type of water is of four types viz., *dhārāja*, *karakājāta*, *tauṣāra* and *haima*. Of them, *dhārāja* is the best.

Dhārāja water

The water that falls from the sky is called *dhārāja*. It should be collected on a clean roof made of stones or through a piece of cloth and collected in vessels of gold and stone. It should be used before it gets spoiled. The rain water which is collected before it falls on the earth is called *divya*. *Dhāra* type of *divya* water alleviates *vāyu*, *pitta* and *kapha* and it is light.

धारं वारि द्विधा ज्ञेयं गङ्गसामुद्रभेदतः ।

Variety

The *dhāra* type of water is of two type viz., *gāṅga* (which is derived from the river (?) Ganges and *sāmudra* (which is derived from the sea).

‘आकाशगंगा⁵ संभूतं जलमादाय दिग्गजाः ॥ ९ ॥

मेघैरन्तरिता वृष्टिं कुर्वन्तीति वचः सताम् ।

According to the saints, *diggajas* (elephant guiding different directions as described in the epic) collect water from *ākāśa gāṅgā* (the *gāṅgā* river in the sky as described in the epic) and release it on the earth in the form of rain through the cloud.

गङ्गामाश्वयुजे मासि यत्प्रवर्पति तोयदः ॥ १० ॥

⁷सर्वदा ⁸तज्जलं पेयं तथा च चरके वचः ।

The *gāṅgā* water which rains from the clouds in the month of *aśvina* (September-October) is always useful for drinking. This is described in *Caraka saṁhitā*.

⁹स्थापितं हेमजे पात्रे राजते मृण्मयेऽपि वा ॥ ११ ॥

[भावप्रकाशः वारिवर्ग १३ : १०-१३]

If this *gāṅga* type of water is collected in a vessel of gold, silver or stone and *śāli* rice is kept in it soaked then this rice does not deteriorate (*akledī*) and it retains its colour for a long time. This is the characteristic feature of *gāṅga* type of water. In *sāmudra* type of water this *śāli* rice deteriorates.

‘आश्विने मासि सामुद्रं गुणैर्गङ्गादिदेशेत् ¹⁰ ।’

The *sāmudra* type of water which rains in the month of *aśvina* (September-October) shares all the properties of the *gāṅga* type of water.

Poisonous Water

The *nāgas* (snakes as described in the epic) moving in the sky emit (*phutkāra*) poisonous air which impregnates the rain water and such rain falls take place from clouds unseasonally i.e. during months other than *aśvina* (September and October). This type of water aggravates all the three *doṣas* in living creatures.

Karakājāta (Water from hail stone)

The *divya* type of water gets condensed because of the impact of wind and heat (*agni*) and falls from the sky in the form of pieces of stone. This is called *karakājāta* water which is like ambrosia.

14

This type of water is un-unctuous, non slimy (*viśada*), heavy and *sthira* (stable). It is penetrating (*dāraṇa*), cooling and dense. It alleviates *pitta* and aggravates *kapha* as well as *vāta*.

Tauṣāra (Water from dew & frost)

The water on the sea coast gets impregnated with heat (*vahni*). It is free from portions of smoke and is called *tuṣāra*. It is generally unwholesome for living creatures but it is useful for plants.

Tauṣāra types of water aggravates *vāyu*. It is cooling, un-unctuous and dense. It does not aggravate *pitta*. It cures ailments like aggravation of *kapha*, *urustambha* (a disease characterised by immobility of thigh), *kuṣṭha* (obstinate skin diseases including leprosy), *agni* (digestive power), *medas* (adiposity) and *gaṇḍa* (goitre).

यत्तदेव हिमं हैमं जलमाहुर्मनीषिणः ।

Haima (Water from snow)

When the snow (*hima*) collected on the top of hills melts and this water comes through rain fall, it is called *haima* water,

²³

This water is heavier and cooling. It alleviates *pitta* and aggravates *vāyu*.

Another view

The sea water being impelled by heat (*anala*) and smoke gets condensed (solidified). It is carried by the wind to the north which is called *hima* (snow) by sages.

‘हिमन्तु शीतलं रुक्षं दारणं सूक्ष्ममेव च ।

This snow (*hima*) water is cooling, ununctuous, *dāraṇa* (which causes excision) and subtle. It does not vitiate either *kapha* or *pitta* or *vāyu*.

²⁷

Bhauma (Water on earth)

Depending upon the attributes of the land, the *bhauma*

type of water is first classified into three types viz., *ānūpa*, *jāngala* and *sādhāraṇa*.

The area which contains a lot of water, which is surrounded by many trees and where many diseases caused by *vāyu* and *kapha* are manifested is called *ānūpa* (marshy land). The land which has less of water and fewer trees and where diseases of *pitta* and blood occur is called *jāngala* (arid land). The land which is in between these two categories is called *sādhāraṇa* (moderate land).

आनूपोद्भवमानूपं जांगलं जङ्गलोद्भवम् ।

The water found in marshy areas is called *ānūpa*, that of arid areas is called *jāngala* and that of the moderate type of land is called *sādhāraṇa*.

[भावप्रकाशः वारिवर्ग १३ : ३१]

Attributes

The *ānūpa* type of water reduces the power of digestion

and aggravates *kapha*. It is despicable. It causes many diseases. The *jāṅgala* type of water has properties which are just opposite to *ānūpa* type. The *sādhāraṇa* type of water is sweet, digestive stimulant, cooling, light and refreshing. It produces the feeling of comfort and cures *trṣṇā* (morbid thirst) and *dāha* (burning syndrome).

Another Classification

The *bhauma* type of water is also classified in a different way like *nādeya* (which is derived from *nadī* or river) etc. Their characteristics and properties will now be described.

‘नद्या नदस्य वा नीर’ नादेयमिति कीर्तितम् ।

Other Varieties

The good and bad qualities of the water of rivers, lakes, ponds, wells and springs should be determined on the basis of the attributes of the land in which they are situated.

Water in different seasons

In the *hemanta* (early winter) and *śiśira* (later part of winter) seasons the water of *saras* (big pond) and *taḍāga* (small pond) is useful. In spring and summer the water of a well, *vāpī* (big well) and *nirjhara* (spring) is useful. In the spring and summer seasons, river water should not be used because it gets polluted by poisonous leaves, flowers etc., and also by the polluted springs. During the rainy season, *audbhida* type of water (that comes out by piercing the earth) and the water that is collected directly from the sky (*āntarikṣa*) is useful. During autumn, river water and *aṁśūdaka* (described below) are useful.

Aṁśūdaka

The water which is exposed to the sun's rays during the day time and the moon's rays during the night time is called *aṁśūdaka*.

It is unctuous. It alleviates all the *doṣas*. It is *anabhiṣyandi* (which does not obstruct the channels of circulation) and free from defects. It is like *āntarikṣa jala* (water collected directly from the sky). It is strength promoting, rejuvenating, intellect promoting, cold and light. It is like ambrosia.

In the month of *pausa* (December-January) the water of *saras* (big pond) is useful. In the month of *māgha* (January-February) the water of *taḍāga* (small pond) is useful. In *phālguna* (February—March) well water is useful. In *caltra* (March—April) the water of *cauṇḍya* (a big well without a boundary wall) is useful. In *vaiśākha* (April—May) spring water is useful. In *jyeṣṭha* (May—June) *audbhida* (the water that comes out penetrating the earth) is useful. Well-water is useful in *āṣāḍha* (June—July) and the water collected directly from the sky (*divya*) is useful in *śrāvaṇa* (July—August). In *bhādrapada* (August—September) well-water is useful and in *aśvina* (September—October) the water of *cunḍa* (big well without any border wall) is useful. In *kārtika* (October—November) and *mārgaśīrṣa* (November—December) all types of water are useful.

शिरोहृद्रोगकुष्ठानां हेतवः श्लीपदस्य च ॥ ६६ ॥

The rivers which flow towards the west generally carry clean water. Those flowing towards the sea of the east are generally of slow current and their water is heavy. Rivers originating from *Parijātra*, *Vindhya* and *Sahya* mountains carry water which causes *śīraroḡa* (diseases of head), *hṛdroḡa* (diseases of heart), *kuṣṭha* (obstinate skin diseases including leprosy) and *ślīpada* (filariasis).

Polluted water

The water which is mixed with the urine, stool, egg or embryo of insects, grass, leaves and poisons, and which is freshly collected on the ground should not be used either for a bath or for drinking. By doing so, the person falls a victim to a number of diseases—both external and internal. There is no doubt about it.

Water is the life of all living creatures and the entire world is pervaded by water. Therefore, when a person is extremely thirsty then giving water is not prohibited. If water is not given, then the thirsty person becomes unconscious and succumbs to death. Therefore in all circumstances water is never prohibited.

Hot water

The water which is reduced to half after boiling and which is hot is called *uṣṇodaka*. This hot water is always wholesome and it cures *śvāsa* (asthma), *kāsa* (bronchitis), *jvara* (fever), aggravation of *kapha* and *vāyu*, *āma* and aggravation of *pitta*. It cleanses the urinary bladder and gets detached the adhered *kapha*. It helps in the elimination of *vāyu*. When hot water is taken at night, it removes indigestion.

When the water is boiled and reduced to one-fourth, it is called *ārogyāmbu* (healthy water). It is always wholesome. It cures *śvāsa* (asthma), *kāsa* (bronchitis) and aggravation of *kapha*. It instantaneously reduces fever. It is purgative, digestive

stimulant, carminative and light. It cures *ānāha* (flatulence), *pāṇḍu* (anemia), *śūla* (colic pain), *arśas* (piles), *gulma* (phantom tumour), *śoṭha* (oedema) and *udara* (obstinate abdominal diseases including ascitis).

It is useful in *trṣā* (morbid thirst), *āma*, *śūla* (colic pain), *aśuddhi* (when the purificatory therapy has not acted properly) and *nava jvara* (beginning stage of fever).

[माधवद्रव्यगुणः तोयवर्ग १५ : ४३]

When the boiled water is cooled by pouring over another container, it becomes constipative and difficult of digestion because during this process the water comes in contact with a lot of air.

The water of tender coconuts is unctuous, delicious, cooling, cardiac tonic and digestive stimulant. It cleanses the urinary bladder and cures *raktapitta* (a disease characterised by bleeding from different parts of the body) and *pipāsā*

(morbid thirst). It is heavy.

Time of taking water

Water taken before eating food causes *kāsa* (bronchitis) and *agnimāndya* (suppression of the power of digestion). When it is taken during the process of eating, it stimulates the power of digestion. If, however, it is taken after the completion of the process of eating, then it causes *sthaulya* (adiposity).

अजीर्णं भेषजं वारि जीर्णेऽन्ने च बलप्रदम् ।

अमृतं भोजनाद्धं तु भोजनोपरि तद्विषम् ॥ ९० ॥

If there is indigestion water works as a medicine. When there is proper digestion, intake of water promotes strength. When taken in the middle of a meal it works like ambrosia and when taken after a meal, water works like a poison.

“अत्यम्बुपानान्नं विपच्यतेऽन्नमनम्बुपानाच्च स एव दोषः ।

[माधवद्रव्यगुणः तोयवर्ग १५ : ५३]

If water is taken in excess or if water is not taken at all, then it hampers the process of digestion. Therefore with a view to promoting the power of digestion, a person should take small quantities of water very frequently.

Polluted water should not be used.

The signs and symptoms of polluted water are as below :

The water which is mixed with mud, moss, grass, lotus leaf etc., which is not exposed to the rays of the sun and the moon and wind and which has manifested smell, colour and taste, is called polluted.

अनात्तिवं वार्षिकमपि प्रथमं तच्च भूमिगम् ।

The water collected of unseasonal rain or the water collected from the ground immediately after rain is also polluted. It aggravates all the *doṣas*.

Polluted water has defects of touch, colour, taste, smell, *vīrya* (potency) and *vipāka* (taste after digestion).

Roughness, sliminess, heat and sticking to teeth—these are the defects in touch. The appearance of mud, sand and moss, and variegated colour are the defects in colour.

Manifestation of taste is the defect in taste.

The presence of a foul smell is the defect in smell.

When water is taken, if it gets digested after a long time and if it produces thirst, heaviness, colic pain and salivation, then these are the defects in potency.

If water gets digested very late and causes fermentation of the food, then it should be determined that the water has the defect of *vipāka*.

A person who takes defective water succumbs to many diseases.

Water pollution can be corrected by seven items, viz., (1) *kataka*, (2) *gomeda*, (3) *visa granthi*, (4) *śaivāla mūla*, (5) *vastra* (cloth), (6) *muktā* (pearl) and (7) *maṇi* (jewel).

For cooling the water, the container should be kept in an airy place, water should be cooled over the container, the water should be stirred with the help of a stick, it should be fanned, the container should be covered with a piece of cloth, sand should be poured over water and the container should be kept hanging on a *śikya*.

Boiling in different seasons

During summer and autumn seasons, water which is boiled and reduced to one-fourth is useful. During the remaining seasons, viz., *hemanta* (early winter), *śiśira* (later part of winter), rainy season and spring season, water boiled and reduced to half is useful.

Another view

During the rainy season, autumn, *hemanta* (early winter), *śiśira* (later part of winter), spring and summer, water to be used should be boiled and reduced to 6/8 (*vasu*), 5/8 (*vāṇa*), 4/8 (*veda*), 3/8 (*tri*), 2/8 (*pakṣa*) and 1/8 (*ekabhāga*) respectively.

अत्र यथा दोषाणां हीनता प्रौढता तथा व्यवस्था कल्पनीया ॥ ६९ ॥

In this context, however; the exact nature of processing should be determined on the basis of the diminution and aggravation of the *doṣas*.

Removal of pollution

For the removal of pollution, the boiled water should be exposed to the sun's rays and in this water hot pieces of gold, silver, iron, stone, sand or clod of earth should be immersed seven times. To this water fragrant things like *karpūra*, *jātī*, *punnāga*, *pāṭalā* etc. should be added. This should then be filtered with the help of a clean and compact piece of cloth. It should be protected from small insects. In the vessel containing this clean water, *kataka*, pearl etc. should be added. This process corrects pollution.

आमं जलं जीर्यति याममात्रं तदद्धमात्रं शृतशीतलं च ।

Time taken for digestion

Unboiled water gets digested in one *yāma* (three hours). The water which is boiled and cooled takes one and a half hours for digestion. The water which is boiled and warm gets digested in forty five minutes. These are the three different times for digestion of water.

॥ इति वारिवर्गः ॥

Thus end the groups dealing with different types of water.

The *gargabha* type of fish is sweet and unctuous. It alleviates *vāyu* and aggravates *kapha*.

इंवाकस्त्वनभिष्यन्दि नेपा पीनसनाशनः ॥ १४ ॥

Invāka

The *invāka* type of fish does not obstruct the channels of circulation and it cures *pīnasa* (chronic rhinitis).

अनभिष्यन्दि मधुरा इंविका रसवर्धिनी ।

Imbikā

The *imbikā* type of fish does not obstruct the channels of circulation. It is sweet and it increases plasma.

लघवः क्षुद्रमत्स्यास्तु ग्राहिणो ग्रहणीहिताः ॥ १५ ॥

Small fish

Different types of small fish are light and constipative. They are useful in *grahṇī* (sprue syndrome).

मत्स्यकूर्मखगाण्डानि स्वादु बाजीकराणि च ।

Eggs

The eggs of fish, tortoise and birds are sweet and aphrodisiac.

[भावप्रकाशः मांसवर्ग ११ : १२५]

If the egg of birds is prepared along with egg of fish, then it becomes unctuous, promoter of corpulence and heavy. It increases *kapha* and fat, promotes strength, produces fatigue and cures *meha* (obstinate urinary disorders including diabetes).

विष्टभिनः शुष्कमत्स्या अवल्या दुर्जरामताः ।

Dry fish

The dry fish produces wind in the colon. It does not promote strength and it is difficult of digestion.

पूतिमत्स्या अभक्षा स्युः सर्वदोषप्रकोपणाः ।

Putrified fish

The fish which is putrified should not be eaten. It aggravates all the *doṣas*.

18

‘दग्धमत्स्यो गुणैः श्रेष्ठः पुष्टिकृद्बलवर्द्धनः ॥ १७ ॥’

[भावप्रकाशः मांसवर्ग ११ : १२७]

Burnt fish

The burnt fish is excellent in property. It is nourishing and strength promoting.

19

‘नावेया मधुरा मत्स्या गुरवो मास्तापहाः ।

कषायानुग्मस्नेपां शष्पशैवालभोजनः ॥ १८ ॥'

[सुश्रुतः सूत्रस्थान ४६ : ११४-११५]

River fish

The fish collected from river is sweet and heavy. It alleviates *vāyu* and cures *rakta pitta* (a disease characterised by bleeding from different parts of the body). It is hot, aphrodisiac and unctuous. It produces less of stool. It is astringent in *anurasa* (subsidiary taste). The river fish feed on grass and moss.

‘सरस्तङ्गायसंभृताः स्निग्धा स्वादुरमा. स्मृता’ ।’

[सुश्रुतः सूत्रस्थान ४६ : ११७]

Pond fish

The fish collected from big and small ponds is unctuous and sweet in taste.

[सुश्रुत सूत्र ४३ : ११६-१२१]

Well fish

The fish of *cunḍa* (a big well without boundary wall) and well is better than the sea fish and river fish because the former is a strong alleviator of *vāyu*. The fish of *vāpi* (a big well with a boundary wall and a stair case) is better than the fish of *cunḍa* and *kūpa* because the former is unctuous and sweet in *vipāka*.

Fish in different seasons

In *hemanta* (early winter), fish from a well is useful and in *śiśira* (later part of winter) fish from big ponds is useful. In the spring season, river fish is most useful and in summer season, fish collected from lake is useful. In rainy season, fish collected from small ponds is wholesome and in autumn, fish from springs is useful.

[माधवद्रव्यगुणः मत्स्यवर्ग २० : १२-१३]

Heaviness

The fish of a big size is generally heavy. In comparison to the fish which is very active, the one with a sluggish movement is heavy. In comparison to the young ones, the old fish is heavier. The male fish is heavier than the female. In comparison to the fish having a soft body, the one having a compact body is heavier. In comparison to the birds which move in the sky, the animals which move on the ground are heavier. Those which feed on heavy and on un-unctuous articles in large quantities and those having accumulated fat are heavier.

Habitat

The meat of birds inhabiting deserts is light and alleviator of *vāyu*. The meat of birds which feed on fish aggravates *pitta* and alleviates *vāyu*. It is heavy. The meat of birds which live on water is alleviator of *kapha*, light and ununctuous. The meat of birds which eat the meat of other animals is nourishing, heavy and alleviator of *vāyu*.

॥ इति मत्स्यवर्ग ॥

Thus ends the group dealing with various types of meat and fish.

CHAPTER 23

‘मंडस्तु त्रिविधो ज्ञेय एकद्वित्रिपरिश्रुत ।¹

Maṇḍa

Maṇḍa is prepared by filtering once, twice or three times. Thus, it is of three types.

लाजैभृष्टैरभृष्टैश्च तण्डुलैः परिसस्कृतैः ॥ १ ॥²

चतुस्त्रिद्विगुणाम्भः स्यात् पूर्वः³ पूर्वो लघुर्हितः ।

Lāja maṇḍa

Lāja maṇḍa is prepared either after frying or without frying the *lājā* (fried paddy). Before preparing *lājā*, the rice should be made clean. Thereafter, for its preparation water is added four, three or two times. The former varieties are lighter than the latter ones.

लाजमण्डो विशुद्धानां पथ्यः पाचनदीपनः ॥ २ ॥

Lāja maṇḍa is wholesome for a person whose body is cleaned by the administration of elimination therapy. It is

carminative and a digestive stimulant.

वातानुलोमनो हृद्यः⁴ पिप्पलीनागरैर्युतः ।

When added with *pippalī* and *nāgara* it helps in the elimination of *vāyu* through the downward tract. It is a cardiac tonic.

पाचनो दीपनश्चैव पित्तश्लेष्मानिलापहः ॥ ३ ॥
शूलानाहविबन्धघ्नो धान्यमण्डः⁵ प्रकीर्तितः ।

Dhānya maṇḍa

Dhānya maṇḍa is carminative, digestive stimulant and alleviator of *pitta*, *kapha* and *vāyu*. It cures *śūla* (colic pain), *ānāha* (flatulence) and *vibandha* (constipation).

वाते वा सकफे पित्ते सामे वा तरुणज्वरे ॥ ४ ॥⁶
वाद्यमंडं प्रशसन्ति पटोलमगधान्वितम् ।
[वाय्यमण्डो यवैर्भृष्टैर्लाजमडस्तु शालिभिः]⁷ ॥ ५ ॥

Vāṭya maṇḍa

Vāṭya maṇḍa mixed with *paṭola* and *magadhā* is useful in the aggravation of *vāyu*, *kapha* and *pitta*, in *āma* and in the beginning stage of *jvara* (fever).

Vāṭya maṇḍa is prepared by fried barley and *lāja maṇḍa* is prepared by fried *śāli*.

रक्तशाल्यादिभिर्धान्यैर्मण्डो⁸ मधुरशीतलः ।
⁹श्रेष्ठो संतर्पणो बल्यो रक्तपित्तप्रसादनः¹⁰ ॥ ६ ॥

Raktaśāli maṇḍa

The *maṇḍa* prepared of red variety of *śāli* etc., is sweet and cooling. It is the most wholesome, refreshing and strength

promoting. It alleviates *rakta pitta* (a disease characterised by bleeding from different parts of the body).

सुतण्डुलानां प्रसृतिर्द्वयं च तदद्धमुद्गाः कटुकत्रयं च ।

11

कुस्तुम्बरीसैन्धवर्हिगुतैलमेभिश्च सर्वैः क्रियते च मण्डः ॥७॥

क्षुद्धोधनो बस्तिविशोधनश्च प्राणप्रदः शोणितवर्धनश्च ।

ज्वरापहारी कफपित्तहंता वायुं जयेदष्टगुणो हि मण्डः ॥८॥

Aṣṭaguṇa maṇḍa

The *maṇḍa* prepared of two *prasṛti* of good quality rice and half in quantity of *mudga* mixed with *kaṭutrāya* (*śuṇṭhī*, *pippalī* and *marica*), *kustumbarī*, *saindhava*, *hiṅgu* and oil is called *aṣṭaguṇa maṇḍa*.

It promotes appetite and cleanses the urinary bladder. It promotes vitality and blood formation. It cures *jvara* (fever) and aggravation of *kapha*, *pitta* as well as *vāyu*.

हस्तवस्त्रकृतो मण्डः सैन्धवेनावचूणितः ।

12

रक्तपित्तहरो ग्राही ज्वरातीसारनाशनः ॥ ९ ॥

Miscellaneous

The *maṇḍa* prepared with the help of the hands and a piece of cloth and sprinkled with the powder of *saindhava* cures *rakta pitta* (a disease characterised by bleeding from different parts of the body). It is constipative and cures *jvara* (fever) and *atisāra* (diarrhoea).

मण्डस्तु दीपयत्यग्निं वानं चाप्यनुलोमयेत् ।

मृदुकरोति स्रोतांसि स्वेदं संजनयत्यपि ॥ १० ॥

Maṇḍa stimulates the power of digestion and helps in the elimination of *vāyu* through the downward tract. It softens the channels of circulation and produces sweating.

लघितानां विरिक्तानां जीर्णे स्नेहे च तृष्यताम् ।

दीपनत्वान्नघृत्वाच्च मंडः स्यात्प्राणधारणः ॥११॥'

[माधवद्रव्यगुणः मण्डवर्ग २५ : १-११]

After fasting, purgation, and digestion of the potion given for oleation therapy, if the patient feels thirsty, then *maṇḍa* helps in the sustenance of his life because it is a digestive stimulant as well as light.

॥ इति मण्डवर्गः ॥

Thus ends the group dealing with different types of *maṇḍa*.

‘शीतोष्णतोयासवमद्ययूषफलाम्लधान्याम्लपयोरसानाम् ।

व्याधि⁴ काल च विभाव्य⁵ धीरैर्द्रव्याणि⁶ योज्यानि च तानि तानि ।

Anupāna

Cold water, hot water, *āsava*, alcohols, *yūṣa*, *phalāmla*, *dhānyāmla*, milk and juice—these are generally used as *anupāna* and these should be used in proper quantity after ascertaining their utility, the nature of the disease and its stage of manifestation.

सर्वानुपानेषु वर वदन्ति मेध्यं यदम्भः शुचिभाजनस्थम् ॥ २ ॥’

[माधवद्रव्यगुणः अनुपानविधि २८:१-२]

Among all the *anupānas* the water which is kept in a clean pot is the best. It promotes intellect.

‘स्निग्धोष्ण मारुते शस्तं पित्ते मधुरशीतलम् ।

कफेऽनुपान रूक्षोष्ण क्षये मांसरसः परम् ॥ ३ ॥

उष्णोदकानुपानं तु स्नेहानामथ शस्यते ।

ऋते भल्लातकस्नेहात्तत्र तोयं⁷ सुशीतलम् ॥ ४ ॥

If there is aggravation of *vāyu*, *anupānas* which are unctuous and hot are useful; in *pitta* sweet and cooling *anupānas* are useful and in *kapha* ununctuous and hot *anupānas* are useful. If there is *kṣaya* (consumption) meat soup is the best *anupāna*.

After taking oil, ghee etc. hot water should be used as *anupāna*. The oil of *bhallātaka* is an exception to this rule and cold water should be used after this oil.

शीतोदकं माक्षिकस्य पिष्टान्नस्य च सर्वशः⁹ ॥ ५ ॥

दधिपायसमद्यत्तिविषयुष्टेस्तथैव¹⁰ ये ।

After honey and pastries (*piṣṭānna*) the *anupāna* should invariably be oil, *yūṣa*, *amla kāñjika* or cold water. Similar types of *anupāna* are useful after the intake of *dadhi*, *pāyasa* and alcohol and in *viṣa* (poisoning).

केचित्पिष्टमये प्राहुरनुपानं सुखोदकम्¹¹ ॥ ६ ॥

According to some scholars ordinary water should be used as *anupāna* after taking pastries (*piṣṭa*).

पयो मासरसो वापि शालिमुद्गादिभोजिनाम्¹² ।

Milk and meat soup should be used as *anupāna* for persons taking *śāli*, *mudga* etc.

माषादेरनुपानं तु धान्याम्ल दधिमस्तु वा¹³ ॥ ७ ॥

Dhānyāmla or *dadhi mastu* is useful as *anupāna* for persons taking *māṣa* etc.

अल्पाग्नीनामनिद्राणां तन्द्राशोषभ्रमक्लमे¹⁴ ।

मद्यमांसोचितानां च मद्यमेवानुशस्यते ॥ ८ ॥

Alcohol is useful as *anupāna* for persons suffering from weak digestive power, sleeplessness, drowsiness, *śoṣa* (consumption), *bhrama* (giddiness) and *klama* (physical fatigue) and also for persons who are habituated to alcohol and meat.

अमद्यपानामुदकं फलाम्लं वा प्रशस्यते ।

Persons who are not accustomed to drinking should use water or *phalām̐la* as *anupāna*.

15

उपवासाध्वभाष्यस्त्रीमारुतातपकर्मभिः ॥ ६ ॥

16

क्लान्तानामनुपानार्थं पयः पथ्यं परं स्मृतम् ।

Milk is extremely wholesome for persons who are fatigued because of fast, excessive walking, talking or sexual intercourse and exposure to wind, sun ray or excessive exercise.

सुराकृशाणां स्थूलानामनुपानं मधूदकम् ॥ १० ॥

Madhūdaka should be used as *anupāna* by persons who are emaciated because of excessive drinking and also for persons who are obese.

17

निरामयाणां चित्तं [?] तु भुक्तमध्ये प्रकीर्तितम् ।

18

For healthy persons *anupāna* should be used in the middle of the food.

हितं शोणितपित्तेभ्यः क्षीरमिक्षुरसरतथा ॥ ११ ॥

Patients suffering from *śoṇita pitta* (a disease characterised by bleeding from different parts of the body) should use milk and sugar cane juice as *anupāna*.

19

अक्षशेलुशिरीषाणामासवास्तु विषात्तिष्ठु ।

Patients suffering from poisoning should use the *āsava* of *aksa*, *śelu* and *śirīṣa* as *anupāna*.

20
दोषवत् गुरु वा युक्तमतिमात्रमथापि वा ।
21
यथोक्तेनानुपानेन सुखमन्नं हि जीर्ज्यति ॥ १२ ॥

When *anupāna* is used in excess quantity, then it is injurious and heavy. If *anupāna* is used according to the prescription, then it helps in easy digestion of food.

‘रोचनं बृंहणं वृष्यं दोषसंघातभेदनम्’ 22 ।
23
तर्पणं मार्दवकरं श्रमक्लमहरं सुखम् ॥ १३ ॥
दीपनं दोषशमनं पिपासाछेदनं परम् ।
24
बल्यं वर्णकरं चापि अनुपानं सदोच्यते ॥ १४ ॥

Anupāna is invariably appetiser, nourishing and aphrodisiac. It helps in the detachment of all the *doṣas* from the tissue elements. It is refreshing. It produces softness and cures physical as well as mental fatigue. It produces happiness, stimulates digestion, alleviates *doṣas*, reduces thirst and promotes strength as well as complexion.

25
तदादौ कर्शयेत्पीतं स्थापयेन्मध्यसेवितम् ।
पश्चात्पीतं बृंहयति तत्समीक्ष्य प्रयोजयेत् ॥ १५ ॥

If *anupāna* is used before food, then it causes emaciation. If it is used in the middle of the food, then it keeps the *doṣas* in their proper positions. If it is used after food, then it produces a nourishing effect. Keeping these facts in view one should administer *anupāna*.

26

28
न पिबेच्छ्वासकासात्तर्षणी रोगे वाप्यूर्ध्वजत्रुगे ।
29 30
क्षतोरस्तु प्रसेकी च यस्य [ह्य] पहतः स्वरः ॥ १७ ॥

If food is taken without any drink, then it remains there without undergoing the process of softening. Therefore one should use *anupāna*. It should not be used by patients suffering from *śvāsa* (asthma), *kāsa* (bronchitis), diseases of the head and neck, *urah kṣata* (phthisis), *praseka* (excessive salivation) and impairment of voice.

³¹

³²
प्रदूष्यामाशयं तद्धि तस्य कंठोरसि स्थितम् ॥ १८ ॥

³³
स्यादग्निसादच्छर्द्यादीन् जनयेदामयान्बहून् ।

One should not indulge in drinking, walking, talking, reading and sleeping in excess. By doing so the stomach gets vitiated and the *doṣas* situated in the throat and chest produce indigestion, vomiting and many such diseases.

³⁴
अनुपाने प्रयोक्तव्य व्याधौ श्लेष्मभवे ³⁵ पलम् ।

पलद्वय त्वनिलजे पित्तजे च पलत्रयम् ॥ १९ ॥'

[माधवद्रव्यगुणः अनुपानविधि २८ : ४-२१]

In diseases caused by *kapha* the *anupāna* should be administered in a dose of one *pala* (48 ml.). In diseases caused by *vāyu* its dose is two *palas* (96 ml.). In diseases caused by *pitta* the dose of *anupāna* is three *palas* (144 ml.).

॥ इत्यनुपानविधिः ॥

Thus end the section dealing with the method of administration of different types of *anupāna*.

Description of groups of drugs according to *Suśruta*

What has been described in brief before clearly shows the way for the treatment of patients suffering from diseases caused by *vāyu* etc. even to a less intelligent person who is not acquainted with *Caraka* etc. It is not necessary to describe the

usage to which these drugs can be put by an intelligent physician who is specialised in the treatment of internal diseases.

⁴ योगा रोगात्तानां विभज्य भिषजा प्रकल्पन्ते ॥ ५ ॥

It has been stated by the sages that the human body which suffers from diseases is a conglomeration of *doṣas*, *dhātus* (tissue elements) and *malas* (waste products). If there is morbidity in this body, the physician should alleviate these ailments by the administration of drugs. This has already been stated before in brief. Now some of these drugs are being described by putting them into different groups for the convenience of treatment. These groups are thirty-seven in number. After ascertaining the predominance of either *vāyu*, *pitta* or *kapha* and the nature of the compound, disease and the patient, the physician should administer these drugs after proper selection.

These drugs can be used in the form of medicated ghee, medicated oil, powder, paste, unguent, spray, bath, drink, *āsthāpana* type of enema, *anuvāsana* type of enema, inhalation, collyrium and suppository.

Suśruta

Depending upon the nature of the *doṣas* involved in the manifestation of the disease, the physician should prescribe drugs described in these groups either separately or jointly. Even drugs of all the groups can be used together.

Proper dosage

If all these drugs are used in excess of the strength of the disease, then after curing the disease, they produce other ailments. If these are used in excess of the digestive power then they, being undigested, cause flatulence. If they are used in excess of the strength of the individual then they cause mental fatigue, fainting and intoxication. Therefore, these should be administered in appropriate dosage.

Among the *śamī dhānyas* (grains), *māṣa* is considered to be the most unwholesome. This view is not correct because *māṣa* cures diseases caused by the vitiation of *vāyu*, *śūla* (colic pain) and *ādhmāna* (flatulence). It promotes strength as well as virility. Why should it be treated as unwholesome ?

स्वस्थरोगिणाम् ।

Disease have different varieties and stages. Therefore, physicians who aim at preservation of health do not fix a particular drug for a particular ailment. There are however things which are extremely good or extremely bad. For example, milk is always useful whereas poison is always harmful both for healthy persons as well as patients.

General description of fruits

The pulp of the fruit has the property of the fruit itself.

Fruits which are afflicted by snow, fire, storm, wild animals, and insects and which are unseasonal should not be eaten. Similarly, excessively ripe fruits should not be eaten

All fruits in general produce *āma doṣa* (a product of improper digestion and metabolism). The fruit of *bilva* is an exception to this general rule.
